

Clinical Trial Protocol

Iranian Registry of Clinical Trials

11 Sep 2026

Comparison of the therapeutic efficacy of cysteamine 5% cream with Hydroquinon 4% cream in epidermal melasma patients

Protocol summary

Study aim

Determination and comparison of the effect of cysteamine 5% cream and hydroquinone 4% cream in treatment of epidermal melasma

Design

Phase 3, parallel group, clinical trial, with consecutive sampling, including 98 patients, single blinded, computerized randomized with permuted blocks

Settings and conduct

The study is conducted in the dermatology clinic of Shiraz University of Medical Sciences. Group 1 applied cysteamine 5% cream and group 2 applied hydroquinone 4% cream nightly on the face. The patients are assessed at the beginning of treatment, 2nd month and 4th month by SkinColorCatch and photography by Visioface. The investigator is blind to the type of treatment.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age of 18 to 50 years; epidermal melasma
Exclusion criteria: dermal melasma; consumption of melasma causing medications; consumption of melasma treatments; pregnancy; lactation

Intervention groups

Group 1: Cysteamine 5% cream
Group 2: Hydroquinone 4% cream

Main outcome variables

Measuring melanin index; Determination of modified melasma area severity index score

Scientific title

Comparison of the therapeutic efficacy of cysteamine 5% cream with Hydroquinon 4% cream in epidermal melasma patients

Public title

Comparison of the effect of cysteamine cream and hydroquinone cream in the treatment of melasma

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Epidermal melasma confirmed by Wood's lamp
Duration of melasma more than 6 months
Age 18 to 50 years

Exclusion criteria:

Dermal melasma
OCP consumption during or in the past 3 months before the study
Consumption of oral or topical corticosteroids on the site of melasma during the study
Intolerance to hydroquinone or cysteamine as severe irritation
Other pigmentary disorders
Pregnancy
Lactation

Age

From **18 years** old to **50 years** old

Gender

Both

Phase

3

Groups that have been masked

- Investigator
- Outcome assessor

Sample size

Target sample size: **98**

Randomization (investigator's opinion)

Randomized

Randomization description

The participants were randomized using permuted block randomization (size of each block: 4), in individual units, using random allocation software. The medications are in the similar tubes labeled by numbers of the patients.

Blinding (investigator's opinion)

Single blinded

Blinding description

Despite of close similarity of medications tubes, the participants cannot be blind because of the different instructions for use. Principle investigator, the drug presentation staff, and care provider physician are also aware of the type of drugs. But, data collectors and outcome assessors are not aware of the medication of each patient.

Chloasma

Primary outcomes

1

Description

Melanin index

Timepoint

before intervention and 2 and 4 months after intervention

Method of measurement

SkinColorCatch instrument

Secondary outcomes

1

Description

modified Melasma Area and Severity Scale score

Timepoint

before intervention and 2 and 4 months after intervention

Method of measurement

modified Melasma Area and Severity Scale score formula

2

Description

Lee's investigator global assessment score

Timepoint

2 and 4 months after intervention

Method of measurement

5-point Likert scale for Lee's investigator global assessment score

3

Description

Lee's patient global assessment score

Timepoint

2 and 4 months after intervention

Method of measurement

5-point Likert scale for Lee's patient global assessment score

Intervention groups

1

Description

Intervention group: Cysteamine 5% cream (Scentispharma, Switzerland) is applied once every night for 15 minutes for 4 months on the face skin.

Category

Treatment - Drugs

2

Description

Control group: Hydroquinone 4% cream which is made by dissolution of 2 grams powder of hydroquinone (Merck, Germany) and 1.5 grams ascorbic acid powder (Merck, Germany) in 50 grams of vanishing cream (Minoo, Iran) is applied once every night overnight for 4 months on the face skin.
