### Comparison the effect of garlic with lemon juice on the level of blood pressure and comfort of patients with hypertension Referring to Farshchian Medical Center in Hamedan, 1397

#### Protocol summary

##### Study aim

The purpose of this study was to compare the effect of garlic consumption with lemon juice on the blood pressure and comfort of patients with hypertension.

##### Design

Randomized clinical trial with three groups and control group

##### Settings and conduct

This study is a clinical trial of three groups before and after the Farshchian heart center of Hamadan. Patients will be randomly divided into three groups: the Lemon juice group, the recipient of the garlic and the control group. The first group will eat 10 grams of garlic after breakfast and 10 grams of garlic after dinner for 20 days and then relax for a week, during this one week of relaxation measure the blood pressure and comfort of the patient. We take 10 grams of garlic after breakfast and 10 grams of garlic after dinner for another 20 days. We measure blood pressure and comfort again. The second group feeds 10 cc lemon juice a day after breakfast and 10 cc after dinner for 20 days and then resting for a week. In this week, we measure the amount of blood pressure and comfort of the patient. And again for another 20 days, he consumes 10 cc lemon juice a day after breakfast and 10 cc after dinner. We measure the blood pressure and patient comfort again. The third group will receive just the usual treatment.

##### Participants/Inclusion and exclusion criteria

Inclusion criteria: Age is between 18 and 60 years, Have complete and informed consent to participate in the study. No other disease Exclusion criteria: patient death, Unwillingness to continue participating in the stud

##### Intervention groups

In the first group, 20 grams of garlic per day for 20 days, and in the second group 10 cc of lemon juice for 20 days will be given daily, and the blood pressure of the patients and their degree of comfort will be evaluated and

compared. In the control group, no special action will be taken.

##### Main outcome variables

Blood pressure, comfort
