Comparing Face-to-Face and Telephone-Based Cognitive Behavioral Therapy on Hot Flushes in Postmenopausal Women

Protocol summary

Study aim

Comparing Face-to-Face and Telephone-Based CBT on Postmenopausal Hot Flushes

Design

This is a randomized clinical trial with two intervention groups of 20 people, community based and pragmatic, with parallel groups and there is no blindness

Settings and conduct

This research will be conducted in the menopausal clinic of Imam Hospital. Our subjects will be selected among eligible registered documents and then women will be invited to participate in this study via phone call .

Participants/Inclusion and exclusion criteria

Inclusion criteria: normal menopause; passing at least one year and maximum five years from the cessation of menstruation; being able to read and write; having at least 10 hot flashes per week in a duration of one month; having a score of more than 1 in response to the kupperman index; having a cell phone. Non-entry criteria: known mental and physical illnesses; history of CBT; drug and other psychotropic substances abuse; under medication for hot flashes

Intervention groups

There will be held six sessions of 30 minutes cognitive-behavioral counseling on a weekly basis for each group. These sessions composed of: providing information about physiology of menopause; introducing cognitive behavioral model (including physiological, cognitive, behavioral and emotional components for hot flashes), teaching breath and relaxation techniques, emphasize the role of stress in boosting hot flashes and cognitive behavioral strategies for reducing it, focus on cognitive responses (Tragedy thoughts and extreme negative beliefs about hot flushes) and behavioral reactions (avoidance and activity) on hot flushes, providing weekly assignments, implementing cognitive behavioral strategies for hot flushes management and breathing techniques and finally, preparing the main list of beliefs, their variability and methods for changing

negative beliefs.

Main outcome variables

Hot flushes

Scientific title
Comparing Face-to-Face and Telephone-Based Cognitive Behavioral Therapy on Hot Flushes in Postmenopausal Women

Public title
Cognitive-Behavioral Therapy (CBT) on hot flushes in postmenopausal women

Purpose
Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Normal Menopause Passing at least one year and maximum five years from the cessation of menstruation
Being able to read and write
Having at least 10 hot flashes per week in a duration of one month
Having a score of more than 1 in response to the kupperman index
Having a cell phone

Exclusion criteria:

Known Mental and Physical illnesses
History of Cognitive Behavioral Therapy(CBT)
Drug and other psychotropic substances abuse
Under medication for hot flushes

Age
From **40 years** old to **60 years** old

Gender
Female

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Randomization description
In this study, eligible individuals will be randomly assigned to two groups of telephone counseling (N=20) and face-to-face counseling (N=20) using block randomization (block size: 4 and allocation ratio: 1). For allocation concealment, 20 four digit numbers will be selected for each participant in the telephone group and face-to face group respectively and will be arranged according to the block size. Then in order to hide the allocation, the numbers will be arranged in blocks of opaque envelop, respectively and will be given randomly to eligible individuals by the secretary.

Health conditions studied

1

Description of health condition studied

Hot flushes in Postmenopausal women

ICD-10 code

N95.1

ICD-10 code description

Menopausal and female climacteric states

Primary outcomes

1

Description

Hot flush score in the Kupperman index

Timepoint

Hot flush at baseline, at the end of intervention, six weeks after intervention, and two months after intervention

Method of measurement

Kupperman Index

Secondary outcomes

empty

Intervention groups

1

Description

For the face-to face group, six sessions of 30 minutes each of cognitive-behavioral counseling will be held on a weekly basis for one intervention groups. These sessions composed of the following issues: expression of the rules and objectives of the study, providing information about physiology of menopause as well its complications and treatment, introducing cognitive behavioral model

including physiological, cognitive, behavioral and emotional components for hot flashes and night sweats, teaching breath and relaxation techniques, emphasizing the role of stress in boosting hot flashes, night sweats and cognitive behavioral strategies for reducing it, focusing on cognitive responses (tragedy thoughts and extreme negative beliefs about hot flushes) and behavioral reactions (avoidance and activity) on hot flushes, providing weekly assignments, implementing cognitive behavioral strategies for hot flushes management, breathing techniques and relaxation for home work and finally preparing the main list of beliefs and cognition as well as their variability and methods to change negative beliefs.
