Effect of spiritual care based on the Sound Heart Model on the anxiety and burden of care in mothers of children with cancer

Protocol summary

Study aim

The effect of spiritual care on the stress and burden of caring for mothers of children with cancer

Design

Quasi- experimental with a control group,

Settings and conduct

For the intervention group, 8 sessions of 20 to 30 minutes in person and groups of 3 to 5 people will be taken and the manual provided by the Spiritual Counseling Counselor will be given to the mothers of the intervention group at the stage of providing spiritual care. Then, immediately and one month after the end of the eighth session the Beck Anxiety and Bargaining Questionnaire will again be completed by the participants in the intervention and control group. It should be noted that there is no intervention for the control group and they will be under the usual care of the department. inventory will be completed by the mothers of the group at the beginning of the study and 4 weeks later. At the end of the study, the package will be provided to the participants of the control group.

Participants/Inclusion and exclusion criteria

B Muslim; passed at least 6 months from the diagnosis of a child's illness; failure to have mental illness; awareness of childhood disease; absence in the same sessions and classes; the child's presence and presence at least 10 days in the department; lack of other stressful events other than childhood during the past year.

Intervention groups

For the intervention group, 8 sessions of 20 to 30 minutes are performed face to face in groups of 3-5 women, and the instruction book provided by the Spiritual Counseling Counselor in the stage of providing spiritual care is given to the mothers of the intervention group at the first session. The control group also receives section routines.

Main outcome variables

Spiritual care

Intervention groups**1****Description**

A total of 86 children with cancer who are eligible to participate in the study will be selected using the available method and will be included in the study. After explaining the actions and obtaining the informed consent, in the first stage, "before intervention," the anxiety and care of the mothers of both intervention groups And control is measured by questionnaires. The second stage of "intervention" will be based on the model of the spiritual heart of the spiritual care. For prevention of inflammation, the information of the control group from a hospital and the intervention group will be selected from the other hospital. This intervention during the childhood admission of children in the hospital during the days when the conditions of the child, mother and child are allowed to run every day, which includes 8

sessions of 20 to 30 minutes in groups of 3-5 people, and a booklet prepared from the Spiritual Counseling Paper at the presentation stage Spiritual care was given to the mothers of the intervention group, and then they were given the first hearing of the Qur'an and the music of the rain, and they will be asked to listen to it through headphones or hangfra. The music is given to them and they are asked to listen to it every day. After the completion of the sessions, anxiety and emergency care questionnaires will be completed immediately and after one month by the intervention group participants. It should be noted that there is no intervention for the control group and they will be under the usual care of the department. At the end of the study, a manual will be provided and the voice packet will be provided to the control group participants
