The effect of combined education through educational film and visual aid cards on the quality of bowel preparation and satisfaction in patients under colonoscopy that referring to Imam Khomeini educational and treatment center of Urmia in 2018

Protocol summary

Study aim

The effect of combined education through educational film and visual aid cards on the quality of bowel preparation and satisfaction in patients under colonoscopy that referring to Imam Khomeini educational and treatment center of Urmia in 2018

Design

This clinical trial was conducted in two groups of control and intervention based on the date of referral of patients to the intervention group (even days) and the control group (odd day), two blinded, each group of 90 people divided into two groups

Settings and conduct

Patients in the colonoscopy unit of Imam Khomeini hospital in Urmia receive educational film on bowel preparation for at least two days before colonoscopy. On the day of the colonoscopy, the quality of the bowel preparation is evaluated by a gastroenterologist who is unaware of both groups.

Participants/Inclusion and exclusion criteria

1. Age: 18-65 years old 2. No history of previous colonoscopy 3. No emergency order for colonoscopy 4. Familiarity with a patient or a companion in Persian or Turkish 5. Having ordered at least two days prior to colonoscopy Conditions of failure to enter 1. Hospitalized patients 2. Drug addiction or strong analgesia 3. Having previous colonoscopy history 4. Cancer patients

Intervention groups

The intervention group will receive colonoscopy training videos, educational film and explanations for the colonoscopy two days before the colonoscopy in colonoscopy unit. The control group will receive routine training

Main outcome variables

Education : quality of bowel preparation : satisfaction
