The effect of counseling with skill training approach on postpartum maternal functioning: a randomized controlled clinical trial

Protocol summary

Study aim

To determine The effect of counseling with skill training approach on postpartum maternal functioning

Design

Randomized controlled trial with two parallel arms

Settings and conduct

This study will be conducted on women who are referred to Tabriz health centers, so that the researcher will attend in the health centers and will select women with first and second birth, based on their records and invite them to participate in the study through phone contact. In the face to face meeting, the Barkin Maternity Functioning Questionnaire will be completed, and women who receive a score of under 80 will be included in the study and will receive written consent. Participants will be assigned to two groups of counseling and control. Four counseling sessions will be held for intervention group. Two weeks after the last session, post-test questionnaires including maternal functioning, infant care behavior and maternal self-efficacy will be completed by the participants in both counseling and control groups.

Participants/Inclusion and exclusion criteria

Participants with first and second birth and with maternal functioning score below 80 and postpartum depression score above 12

Intervention groups

For the intervention group, four counseling sessions will be provided from the fourth week after delivery at intervals of one week. The duration of each session will be 60 to 90 minutes. The control group will receive routine care.

Main outcome variables

Maternal functioning at 10 weeks after childbirth

Health conditions studied**1****Description of health condition studied**

Postpartum maternal functioning

ICD-10 code

Z39.0

ICD-10 code description

Encounter for care and examination of mother immediately after delivery

Primary outcomes**1****Description**

Maternal functioning

Timepoint

Before the intervention and 2 weeks after the end of intervention (four weeks after childbirth)

Method of measurement

Maternal Functioning Barkin Index (MFBI)

Secondary outcomes**1****Description**

Infant care behavior

Timepoint

Before the intervention and 2 weeks after the end of the intervention (four weeks after childbirth)

Method of measurement

Infant Care Behavior Questionnaire

2**Description**

maternal self-efficacy

Timepoint

Before the intervention and 2 weeks after the end of the intervention (four weeks after childbirth)

Method of measurement

Intervention groups

1

Description

Intervention group: For intervention group, four 60-90 minutes counseling sessions with a skill-based approach will be provided.

Category

Behavior

2

Description

Control group: The control group will received routine care.
