

Clinical Trial Protocol

Iranian Registry of Clinical Trials

20 Jun 2026

Comparison of analgesic effects and morphine consumption of intravenous morphine sulfate and intranasal dexmedetomidine with intravenous morphine sulfate in patients with extremity fractures presented in emergency departments

Protocol summary

Study aim

Comparison of analgesic effects and morphine consumption of intravenous morphine sulfate and intranasal dexmedetomidine with intravenous morphine sulfate in patients with extremity fractures presented in emergency department

Design

The design of the study is a randomized clinical trial. The randomization method is blocked. The sample size for each study group is 30.

Settings and conduct

In this research, all patients referred to the Emergency Department of Shohada-e- Haftome tir , Hazrat Rasoul Akram and Firouzgar Hospital, who suffered from extremity fractures will be enrolled. Patients will be randomly divided into two groups based on 10 blocks. A total of 60 patients will be examined. Patients and data analyzers will be blind.

Participants/Inclusion and exclusion criteria

All patients referred to the Emergency Department of Shohada-e- Haftome tir , Hazrat Rasoul Akram and Firouzgar Hospital, who suffered from extremity fractures will be enrolled. Inclusion criteria: Organ trauma leading to acute fractures, Patients over the eighteen years old. Exclusion criteria: Loss of consciousness, Chronic kidney and coronary artery disease, Pregnancy, Drinking alcohol and drugs.

Intervention groups

In intervention group, Patients will receive intravenous morphine sulfate at a dose of 5 mg plus intranasal dexmedetomidine 10 mg per kg of body weight. In control group, Patients will receive morphine at a dose of 5 mg plus a nasal placebo that will be distilled water.

Main outcome variables

Severity of pain after prescribing, Total dosage of the drug.

Scientific title

Comparison of analgesic effects and morphine consumption of intravenous morphine sulfate and intranasal dexmedetomidine with intravenous morphine sulfate in patients with extremity fractures presented in emergency departments

Public title

Effect of intravenous morphine sulfate and intranasal dexmedetomidine on Patients' Pain

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Organ trauma leading to acute fractures Patients over the eighteen years old

Exclusion criteria:

Loss of consciousness Chronic kidney and coronary artery disease Pregnancy Drinking alcohol and drugs

Age

From **18 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant
- Data analyser

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

Patients will be randomly assigned to two groups. In order to randomize, a random block method will be used. For this purpose, we formed blocks with 10 person. In each block, 5 individuals will be in intervention group and 5 will be in control group. A total of 6 blocks will be considered for sample size.

Blinding (investigator's opinion)

Double blinded

Blinding description

Data will analyze by person who is blind to study groups, and patients will also be unaware of the type of treatment.

Health conditions studied**1****Description of health condition studied**

extremity fracture

ICD-10 code

M84.4

ICD-10 code description

Pathological fracture, not elsewhere classified

Primary outcomes**1****Description**

Severity of pain after prescribing

Timepoint

After 15, 30, 60 and 120 minutes after using the drug

Method of measurement

From 1 to 10 (Based on numerical scale).

2**Description**

Total dosage of the drug

Timepoint

After the end of treatment

Method of measurement

Based on the information in the patient file

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Patients will receive intravenous morphine sulfate at a dose of 5 mg plus intranasal

dexmedetomidine 10 mg per kg of body weight.

Category

Treatment - Drugs

2

Description

Control group: Patients will receive morphine at a dose of 5 mg plus a nasal placebo that will be distilled water.
