Evaluation of effectiveness of Sertraline and supportive psychotherapy on anxiety and depression level of Leukemia patient referring to clinic of Ali-ibn-Abitaleb Hospital in Zahedan

Protocol summary

Study aim

The comparison between the effect of Sertraline and supportive psychotherapy on the anxiety and depression of the patients with definite diagnosis of leukemia

Design

Two arm parallel groups randomized trial without blindness

Settings and conduct

This study will be performed in Imam Ali clinic at Zahedan. 60 patients who were administered with the definite diagnosis of leukemia by the specialist and age domain of 18 to 64 years old will be included in our study. one group will be treated by the supportive psychotherapy session for 6 weeks and the other group will be treated by Sertraline. the rate of anxiety and depression will be evaluated y the anxiety and depression questionnaire of Hamilton at the beginning of the treatment, first, third, sixth week after the treatment.

Participants/Inclusion and exclusion criteria

The patients with the definite diagnosis of leukemia and the age domain of 18 to 64 years without any history of previous medical and psychological problems will be included to our study and the patients with the allergy to Sertraline or dissatisfaction will be excluded from the study.

Intervention groups

The first intervention group includes 30 patients who will be treated by supportive psychotherapy session with the duration of each about 90 minutes for 6 weeks and the second intervention group will be treated by the first therapeutic dose of 50 mg of Sertralin which will be increased to 200mg in two weeks due to the lack of response

Main outcome variables

Age, gender, rate of anxiety, rate of depression
