The effect of self-care counseling on depression and anxiety in women with Endometriosis: a randomized controlled trial.

Protocol summary

Study aim

To determine the Effect of self-care counseling on depression and anxiety in women with Endometriosis.

Design

Randomized controlled Clinical Trial

Settings and conduct

The study will be conducted in Alzahra Medical Educational center of Tabriz city on 76 of 15-45 years old women who have Endometriosis diagnosed with laparoscopy and treated in the last 1-3 years. Women who meet the study criteria will be selected using convenience sampling method and if they would like to participating in the study, informed consent will be obtained. Then, the social and demographic characteristics questionnaire, Beck Depression questionnaire, The Splineberger State-Trait Anxiety questionnaire, and the quality of life scale will be completed by the researcher through interview. The participants will be divided into intervention and control groups by a person who is not involved in the sampling using randomized block design according to their history of infertility with a ratio of 1:1 and a block size of 4 and 6.

Participants/Inclusion and exclusion criteria

Inclusion Criteria: Detected Endometriosis with laparoscopy in the last 1-3 years Being in reproductive age 15-45 year. Exclusion Criteria: Presence of any conditions that increase the risk of anxiety and depression. Having high depression and very severe anxiety score.

Intervention groups

For the intervention group self-care group counselling will be conducted at seven sessions of 60-90 min with one week interval. The controls will receive only the routine care.

Main outcome variables

The main outcome is depression and anxiety, which will be measured before the intervention, and 4 weeks after intervention, using the Beck depression Inventory and

the Splineberger State-Trait Anxiety Inventory.

Scientific title

The effect of self-care counseling on depression and anxiety in women with Endometriosis: a randomized controlled trial.

Public title

The effect of counseling on depression and anxiety in women with Endometriosis

Purpose

Education/Guidance

Inclusion/Exclusion criteria**Inclusion criteria:**

Residence in Tabriz city Having at least guidance literacy
Detected Endometriosis with laparoscopy in the last 1-3
years Being in reproductive age 15-45 year Having a
home and mobile phone number

Exclusion criteria:

Presence of any conditions that increase the risk of
anxiety and depression such as Irritable Bowel Syndrome
Use of anti-anxiety and antidepressant drugs over the
past 3 months Self-reported malignant diseases Having
high depression and very severe anxiety score Recent
disastrous events such as death of relatives or divorce
that disrupts the mental health of individual Speech and
hearing impairments that prevent communication with
researcher The self-reported history or having
psychological problems or history of hospitalization in
mental health hospitals

Age

From **15 years** old to **45 years** old

Gender

Female

Sample size

Target sample size: **38**

Randomization (investigator's opinion)

Randomized

Randomization description

The participants are divided into intervention and control
groups using randomized block design according to their
history of infertility with ratio 1:1 and a block size of 4
and 6 by a person not involved in the sampling. In order
to allocation concealment, the type of intervention will
be written on paper and placed in numbered, matte and
packed envelopes. The envelopes will be opened in the
order of participation of the participants and the type of
group will be determined.
