Investigating the Effect of hydroalcoholic extract of Clove plants on the Severity of Pain and Episiotomy Wound Healing in Pregnant mothers

Protocol summary

Study aim

Determination of the effect of hydroalcoholic extract of clove plantlets on the severity of pain and Wound Healing in mothers

Design

The clinical trial has two groups of control and intermediate, two blind and randomized control group

Settings and conduct

146 pregnant women over 20 weeks of age and those who are pregnant are referred to the health centers. Using the random number table, the sample size is completed and then again using the random numbers of the individuals into two groups Intervention and control will be allocated. On the mothers' checklist, they will be written in the intervention and control groups A and B. Then, at the time of delivery and after the episiotomy, the sample is entered into the study. Which is given to the mothers in the intervention group of glass and the solution of cloves, and to the control group of glass containing distilled water, and the use of the solution for both groups will be explained. This study is also a blind one.

Participants/Inclusion and exclusion criteria

Age aged 18-35, Have at least read and write, Having a natural delivery plan, Negative relationship, no indication for cesarean section, Body mass index in range 19.8-29, Embryo unit with Vertex display, Not having a midwifery history, Maternal admission after the 20th week of pregnancy, Pregnancy longer than or equal to 37 weeks, No history of medical and mental illness, Lack of curettage, Rupture of curtains less 10 hours, No history of reconstructive surgery on the vagina and mandarin, No use of certain medications

Intervention groups

Mothers in the intervention group will receive 0.25 mg of clove solution and the mothers will be given the same amount of distilled water as the placebo and the mother will be asked to mix 0.25 mg of the solution twice in 10 days in 4 liters of water and sit for 30 minutes in it.

Main outcome variables

Episiotomy pain; Wound Healing

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Age aged 18-35 Have at least read and write Having a natural delivery plan Life with yours Not having an indication for cesarean section Body mass index in range 19.8-29 Embryo unit with Vertex display Having a midwifery history Maternal admission after the 20th week of pregnancy No history of medical and mental illness Rupture of curtains less 10 hours Lack of curettage No history of reconstructive surgery on the vagina and mandarin No use of certain medications

Exclusion criteria:**Age**From **18 years** old to **35 years** old**Gender**

Female

Phase

3

Groups that have been masked

- Participant
- Care provider
- Investigator

Sample sizeTarget sample size: **146****Randomization (investigator's opinion)**

Randomized

Randomization description

Pregnant women are assigned to a randomized and assigned sample size and inclusion criteria are assigned to intervention and control groups.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, the participating mothers will not be informed about the type of the use of the solution. Also, the clinical care and research will not be informed about the type of solution.

Placebo
