The Effect OF Massage With And Without Aromatic Oils On Pruritus Relife In Hemodialysis Patient

Protocol summary

Summary

One of the most prevalent problems in patients with ESRD with hemodialysis is the pruritus. The aim of this study also was to evaluate the effect of massage with/without aromatic oils on the pruritus relief of the patients undergoing hemodialysis. This was a clinical trial study which cross-sectionally conducted in dialysis centers of Isfahan. Sampling was random sampling method. The study samples randomly divided into two groups. In the aromatic oil method, the aromatic oils combined from 3-5ml of lavender, mint and tea tree oils with 5% purity and in the non-aromatic oils method also sweet almond oil was used.
