

Clinical Trial Protocol

Iranian Registry of Clinical Trials

05 Aug 2026

The effect of self-management program based on the five A model on quality of life of patients with stroke.

Protocol summary

Study aim

Determine the Effect of Self-Management Program Based on five A Model on Quality of Life in Patients with Stroke.

Design

Clinical trial with community based and pragmatic control group, single, non-blind and non-random

Settings and conduct

Self-management training based on five A model on stroke patients referring to Rasoul-e-Akram Hospital in Tehran, which will be carried out in pre-test and post-test in two groups: intervention and control

Participants/Inclusion and exclusion criteria

People with stroke and their ability to be trained

Intervention groups

Self-management training based on the Five A model
The main goal of self-management education is based on the five A model: achieving maximum independence, self-decision making, health promotion based on individual's abilities and lifestyle, as well as improving quality of life. In this research, the Five A model has been used as a self-management framework in the intervention group to evaluate its effectiveness in improving the quality of life of stroke patients. The control group has routine health and rehabilitation care and at the end of the intervention will receive self-management training package.

Main outcome variables

Quality of life in stroke patients

Scientific title

The effect of self-management program based on the five A model on quality of life of patients with stroke.

Public title

The effect of self-management training on quality of life of patients with stroke.

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Diagnosis of a stroke by a neurologist Possibility of self-care and training The absence of another known chronic disease, such as cancer, MS, Parkinson Research units are not from the medical group Not participating in the same study Consent to participate in research Having a score of 8 or higher in abbreviated mental test.

Exclusion criteria:

Having any disabling physical and psychological disorder. Any changes in the patient's condition that require emergency measures.

Age

From **20 years** old to **70 years** old

Gender

Both

Phase

3

Quality of life for patients with stroke

ICD-10 code

I63.9

ICD-10 code description

Cerebral infarction, unspecified

Primary outcomes

1

Description

Quality of life in stroke patients

Timepoint

At the beginning of the study (before the intervention) and at the end of intervention (after 45 days)

Method of measurement

Specific Quality of Life Questionnaire for Patients with Stroke

Secondary outcomes

empty

Intervention groups

1

Description

1. Intervention group: Self-management training 5 A model : (1. Assess 2. Advise 3. Agree 4. Assist 5. Arrange)

The five steps include: 1. Assessing the patient's behavioral level, beliefs and motivations; 2. Guide the patient about personal hygiene and risk factors; 3. Interact with the patient on the actual selection of objective goals; 4. Estimate barriers and program predictions, Practical 5. Track and support and setup . This program will run for 45 days. In the first week, the first three sessions are run in a 1.5 hour session individually. At this stage, the patient's health and lifestyle issues are being studied and goals are addressed to address the problems and improve the quality of life of patients . And the self-management training program will be tailored to the needs of each patient. In the second week, the fourth stage will be implemented. This stage will be held in a session of 30 to 60 minutes to help with the practical program, and the patient's problems will be resolved in relation to the self-management program. In the next four weeks, the fifth step is to follow the patient's performance and support them by telephone. Educational contents include information on patient needs, problem-solving skill training and time management skills, as well as stress management skills and crisis management in life, and ultimately self-confidence promotion strategies that are tailored to the needs of the patients.
