Comparing the effects of 30 minutes of Exergaming with brisk walking in physiological and psychological measures of older adults

Protocol summary

Study aim

Investigating the differences between 30 minutes of exergaming versus brisk walking on some physiological and psychological measures in older adults

Design

This is a single-blind, crossover study comprising of two groups, totaling 40 subjects in a single center setting

Settings and conduct

This study will be conducted in a day center for the elderly and a park. Also, the outcome assessor and data analyzer, which are two different people are blind to which person has been assigned to which group and they just work with the study population, or look at data as a whole.

Participants/Inclusion and exclusion criteria

40 Men and women aged ≥ 60 years are enrolled in the study. The inclusion criteria are as follows: being able to walk with or without assistive devices for 10 meters; obtaining a score < 6 (out of 15) in the Geriatric Depression Scale; obtaining a score > 23 (out of 30) in the Mini-Mental State Examination; responding No to all of the 7 questions in the Physical Activity Readiness Questionnaire; and the exclusion criteria are: having uncorrected vision, hearing or cardiovascular disorders; taking medications that could affect balance or orientation.

Intervention groups

There are 2 interventions in this study. One is Exergaming, which is playing video games that encourage the physical movement of the body by simulating exercise-like activities and the other intervention is walking briskly in an outdoor park. Both of the interventions are done once for 30 minutes.

Main outcome variables

Average and peak heart rate; blood pressure, and double product measurements; time spent in each heart rate zone; the rate of perceived exertion and enjoyment using Physical Activity Enjoyment Scale Questionnaire (PACES)

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Randomized

Randomization description

Each participant is randomized to an AB or BA group, therefore the participant is used as his or her own control. Participants in the AB group receive intervention A (Brisk Walking) followed by intervention B (Exergaming) and the ones in the BA group receive intervention B (Exergaming) followed by intervention A (Brisk Walking).

Blinding (investigator's opinion)

Single blinded

Blinding description

The outcome assessor and data analyzer, which are two different people are blind to which person has been assigned to which group and they just work with the study population, or look at data as a whole.

Method of measurement

Physical Activity Enjoyment Scale Questionnaire (PACES)

Intervention groups

1

Description

Intervention group AB- Brisk walking first and then Exergaming: In this group, the participant will first walk briskly for 30 minutes in a park area. Before the start of intervention, their resting blood pressure will be measured and then their heart rate will be consistently recorded throughout the walking session. Also the rest of research valuables like the Rate of Perceived Exertion Scale and the Physical Activity Enjoyment Scale Questionnaire will be measured/filled after the intervention. After 1 week, these participants will perform the second intervention, which is playing Exergames for 30 minutes. In this session, all of the measurements will be taken just like the previous session.

Title and more details about the data/document

The results of primary outcomes will be shared.

When the data will become available and for how long

two months after the publication of the results.

To whom data/document is available

academic researchers

Under which criteria data/document could be used

Once accessed, individuals have the right to use the

study protocol for rehabilitation purposes.

From where data/document is obtainable

Reza Sayar will be responsive through email.

Rez.Sayar@gmail.com

What processes are involved for a request to access data/document

After receiving the request and mentioning the reasons for the request, the data will be answered within a maximum of one month.
