Comparative study of the effect of laser acupuncture and transcutaneous electrical nerve stimulation on pain reduction patients with myofascial pain dysfunction syndrome

Protocol summary

Study aim

Comparison of Needle Laser and physiotherapy Methods for Reducing Pain in Patients with Myofascial Pain Dysfunction Syndrome

Design

Clinical trials with two parallel groups, Non blind and randomized without placebo control

Settings and conduct

The project is conducted at the Department of Oral and Maxillofacial Diseases, College of Dentistry affiliated to Tehran University of Medical Sciences. We divide the patients into two groups randomly. The first group receives physiotherapy and the second group receives acupuncture laser. A total of 22 volunteers will participate in this study.

Participants/Inclusion and exclusion criteria

Inclusion criteria: People aged 18-60 years old; pain in temporomandibular joint. Non-Inclusion criteria: systemic articulo-muscular disorders

Intervention groups

Intervention group 1: Physiotherapy group in which 11 patients were treated with TENS device with 180 Hz frequency during 10 20-minute sessions. Intervention group 2: acupuncture group in which 11 patient were treated with diode laser with 940 nm and 0.5 w power.

Main outcome variables

Pain

Scientific title

Comparative study of the effect of laser acupuncture and transcutaneous electrical nerve stimulation on pain reduction patients with myofascial pain dysfunction syndrome

Public title

The effect of laser acupuncture and transcutaneous electrical nerve stimulation on pain reduction

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Participant between 18-60 years old Patients With temporomandibular joint Disorder (TMJ) and pain equal or more than 4 according to visual analogue scale (VAS)

Exclusion criteria:

Systemic joint muscle disorder Treated With Another Treatment Pregnancy History of Trauma to face

Age

From **18 years** old to **60 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Tempolar-Mandibular joint Disorder

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Tempolar mandibolar joint Pain

Timepoint

Measuring the pain at the beginning of the study (before the intervention) and twice a week for 5 weeks (totally ten sessions) and one month after the last session as follow up

Method of measurement

VAS Questionary

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: acupuncture group, Laser acupuncture is a method based on stimulating traditional acupuncture points with low power laser, in this group 11 patient were treated with diode laser with 940 nm (Epic, Biolase, USA) and 0.5 w for 40 seconds with continuous mode, tip diameter 5mm and cross section 0.19 cm² in 3 acupuncture points of LI4, ST6, ST7 in each side.

Treatment - Devices

2

Description

control group: Physiotherapy group with TENS for transcutaneous electrical nerve stimulation that 11 patients were treated with TENS (710 L) (Iran novin) device during 10 sessions for 20 min and 180 Hz frequently and Width 300 micro second.
