18 Sep 2026

A Comparison of the effects of puberty health education for girls and mothers on girl students' self-esteem

Protocol summary

Study aim

The effect of puberty health education for Daughters and mothers on Daughters' self-esteem

Design

A blinded randomised controlled clinical trial with 3 groups include of 141 participants, that will be followed for one week and one month after education

Settings and conduct

the sampling method will be a multi-stage method. In the first step, 3 schools will be randomly selected from the first secondary school girls in the 4th district of Shiraz. Then, from selected schools, a class from each section is randomly selected as a cluster, and then individuals in each class will be selected by systematic randomization method. Selected individuals are randomly assigned to three groups of 47 participants by block randomization method.

Participants/Inclusion and exclusion criteria

Education of girls in secondary schools, Students and mothers willingness for participation in the study

Intervention groups

Intervention group 1: Puberty Health Education for girls
Intervention group 2: Puberty Health Education for mothers

Main outcome variables

Self esteem score from Cooper Smith questionnaire

Scientific title

A Comparison of the effects of puberty health education for girls and mothers on girl students' self-esteem

Public title

A Comparison of the effects of puberty health education for girls and mothers on girl students' self-esteem

Purpose

Education/Guidance

Inclusion/Exclusion criteria

Inclusion criteria:

Education of girls in the first secondary schools Students and mothers willing to participate in the study

Exclusion criteria:
History of taking sedative medications Transfer to other school or city Having a chronic disorder Exposure to stressful incidents in the last three months

Age
From **13 years** old to **50 years** old

Gender
Female

Phase
N/A

Groups that have been masked

- Outcome assessor
- Data analyser

Sample size
Target sample size: **141**

Randomization (investigator's opinion)
Randomized

Randomization description
The sampling method will be a multi-stage method. In the first step, 3 schools will be randomly selected from the first secondary school girls in the 4th district of Shiraz. From selected schools, a class from each section is randomly selected as a simple cluster.

Blinding (investigator's opinion)
Double blinded

Blinding description
In this study, the training sessions will be conducted by the researcher, but the completion of the questionnaires will be done by the researcher-helper in three steps before the training, one week and one month after the training. In other words, the outcome assessor and data analyzer are unaware of how the groups are allocated.

Placebo
Not used

Assignment
Parallel

Other design features
Initially, for each of the three groups, demographic and Cooper Smith Self Esteem Questionnaires will be filled in. Then, Puberty health classes will be held in 5 sessions with slideshows, giving pamphlets and lectures for intervention group one and two. Control group will not receive any training. For each of the three groups, Cooper Smith Self Esteem Questionnaire will be filled one week and one month later.
