Comparing of recovery in total intravenous anesthesia(TIVA) with inhalation anaesthetic (sevoflurane) in children between 2-10 years old

Protocol summary

Study aim

Comparing of recovery in total intravenous anesthesia(TIVA) with inhalation anaesthetic (sevoflurane) in children

Design

Clinical trial with intervention groups, with parallel groups, double-blinded, randomized

Settings and conduct

In this double-blind randomized clinical trial, 80 patients from Tabriz children hospital with American society of Anesthesiologists (ASA) status I and II, undergoing elective outpatient operation under an hour(from March 2019 to August 2019) will be enrolled. The patients will be randomized in one of the two groups of total intravenous(T) and sevoflurane anesthesia.

Participants/Inclusion and exclusion criteria

inclusion criteria: children between 2-10 years old, Indicative Outpatient Surgery, Admitted to the Children's Hospital, Parental informed consent for the study, ASA class I and II Exclusion criteria:Sensitivity to any of the drugs used in the study, Children with underlying illnesses such as diabetes; asthma; congenital heart disease and ...

Intervention groups

Intervention group1:" Total Intravenous Anesthesia.received midazolam (0/03-0/05 mg/kg), Fentanyl 1µg/kg as a premedication. Anesthesia induction will be with Lidocaine 1mg / kg and propofol 3-5 mg / kg , Then LMA will be inserted with the right size. . Anesthesia maintenance with total Intravenous Anesthesia will be by infusion of propofol 100-200 mcg / kg and remifentanyl 0.1 mcg / kg, 50% N2O, 50% O2 "Intervention group2:" Inhalation anesthesia with sevoflurane. received midazolam (0/03-0/05 mg/kg), Fentanyl 1µg/kg as a premedication. Anesthesia induction will be with Sevoflurane 8% , 50% N2O, 50% O2 .LMA will be inserted with the right size. Anesthesia maintenance will be by Sevoflurane inhalation 2-3% , 50% N2O, 50% O2

Main outcome variables

duration of stay in recovery, Blood pressure, Heart rate, pain, nausea

Scientific title
Comparing of recovery in total intravenous anesthesia(TIVA) with inhalation anaesthetic (sevoflurane) in children between 2-10 years old

Public title
Comparing of recovery in total intravenous anesthesia(TIVA) with inhalation anaesthetic (sevoflurane) in children

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 children between 2-10 years old Indicative Outpatient Surgery Admitted to the Children's Hospital Parental informed consent for the study ASA class I and II
Exclusion criteria:
 Sensitivity to any of the drugs used in the study Children with underlying illnesses such as diabetes; asthma; congenital heart disease and ...

Age
From **2 years** old to **10 years** old

Gender
Both

Phase
2-3

Groups that have been masked

- Participant
- Outcome assessor

Sample size
Target sample size: **80**

Randomization (investigator's opinion)
Randomized

Randomization description
Random method: Block, Random unit: individual, Random Tool: Random Block 4. for this purpose, 25 blocks with 4 subjects in each block will be used. the combination of all patterns will be considered including AABB, ABAB, BABA, BBAA, BABA, BAAB. For selecting each blocks, dice drooped and the block number will be selected. this procedure continued to completed the allocation and reached to sample size.

Blinding (investigator's opinion)
Double blinded

Blinding description
This is a double-blinded study and Researcher and patients are kept unaware of intervention in each group and In order to allocation concealment, the type of intervention will be written on paper and placed in numbered, matte and packed envelopes.The envelopes will be opened in the order of participation of the participants and the type of group will be determined.
