Clinical Trial Protocol
Iranian Registry of Clinical Trials

30 Oct 2026

A clinical trial for determination of the effect of Curcumin ointment on knee pain and quality of life in older adults with osteoarthritis

Protocol summary

Study aim
Evaluation of the effect of Curcumin ointment on knee pain and quality of life in older adults with osteoarthritis

Design
A single-blind randomized controlled trial will be conducted on two groups of 36 patients.

Settings and conduct
Among the older adults referring to the physician's office, 72 eligible ones will be recruited into two groups of 36. A Visual Analog Scale and the OAKHQOL quality of life questionnaire will be used to assess the severity of knee pain and quality of life at the beginning of the study and at the end of the 4th and the 6th weeks.

Participants/Inclusion and exclusion criteria
Inclusion criteria: Age of 60 years and over, Lack of a known allergy to the herbs of Zingiberaceae family, Lack of known cognitive impairments, Being conscious and able to answer the questionnaire, Having a medical diagnosis of knee osteoarthritis, Willingness to participate and signing the informed consent form.
Exclusion criteria: Occurrence of any allergic reactions to Curcumin ointment, Discontinuing the ointment before the study end, A patient's death or decision to withdraw from the study, Hospitalization and/or moving to other cities.

Intervention groups
1.5 mL of 5% Curcumin ointment will be used in the intervention group twice a day, for six weeks. Vaseline ointment will be used for patients in the control group with a schedule similar to the intervention group.

Main outcome variables
The severity of knee pain and quality of life

Scientific title
A clinical trial for determination of the effect of Curcumin ointment on knee pain and quality of life in older adults with osteoarthritis

Public title
The effect of Curcumin ointment on knee pain and quality of life in older adults with osteoarthritis
Purpose
Other
Inclusion/Exclusion criteria
Inclusion criteria:
Age of 60 years and over. Lack of a known allergy to herbs of the Zingiberaceae family. Lack of a known cognitive impairment (in the assessment of time, place, and person). Being fully conscious and able to answer the questionnaire items. Having a medical diagnosis of knee osteoarthritis. Willingness to participate in the study and signing the informed consent form.
Exclusion criteria:
Appearance of systemic or dermatological allergic reactions to Curcumin ointment during the study. Discontinuing the prescribed ointment before the end of the intervention (at least for three consecutive days). A patient's decision to withdraw from the study. Death of the patient. Hospitalization and/or moving to other cities.
Age
From **60 years** old
Gender
Both

Phase
N/A
Groups that have been masked

- Participant

Sample size
Target sample size: **72**
Randomization (investigator's opinion)
Randomized
Randomization description
Permuted blocked randomization will be used through an online randomizer, to randomly assign 72 older adults with knee pain into 12 six-subject blocks and create two groups of 36 subjects.
Blinding (investigator's opinion)
Single blinded
Blinding description
Patients will be unaware of the type of treatment they receive, and the drugs of the two groups will be prepared in the same containers
Placebo
Used
Assignment
Parallel

Health conditions studied

1

Description of health condition studied
Knee pain and quality of life
ICD-10 code
M15-M19
ICD-10 code description
osteoarthritis

Primary outcomes

1

Description
Knee pain
Timepoint
Before the intervention, four weeks after the intervention, six weeks after the intervention.
Method of measurement
The score of a Visual Analog Scale for knee pain.

Secondary outcomes

1

Description
Quality of life
Timepoint
Before the intervention, four weeks after the intervention, six weeks after the intervention.
Method of measurement
The score of Osteoarthritis Knee and Hip Quality of Life Questionnaire.

Intervention groups

1

Description
The intervention group: 1.5 mL of 5% Curcumin ointment will be prescribed twice a day (once in the morning and once at night before bedtime), for six weeks.
Category
Treatment - Drugs

2

Description
The control group: 1.5 mL of Vaseline ointment will be prescribed twice a day (once in the morning and once at night before bedtime), for six weeks.
Category
Treatment - Drugs
