The Effect of Education According to Roys Adaptation Model on the Quality of life of Family caregivers of Mental patients with a History of Admission to Mental Hospitals of Armed Force

Protocol summary

Study aim

This study aimed to investigate the effect of education based on the adaptive pattern on the quality of life of home-care carers in psychiatric patients.

Design

Clinical randomized controlled trials

Settings and conduct

A total of 50 home caregivers , military hospitals in Bushehr,available sampling method, two groups of tests and control. Quality of care was assessed by Sf-36 quality of life questionnaire before and one month after intervention. Data were analyzed using Spss software.

Participants/Inclusion and exclusion criteria

Inclusion criteria include the first-degree dependent who is the main caregiver and lives with the patient at home, with cyclical upsurges, having informed consent for participation in the study, having a child aged between 20-60 years without any physical defects, mental illness Or taking mental drugs, addiction and misinformation, the absence of another crisis, such as the divorce or death of loved ones in the last six months, and the care of a patient with a history of hospitalization in military hospitals. Exit criteria for absenteeism in more than one session, other critical events such as divorce or death of loved ones, participation in another educational program and reluctance to continue studying

Intervention groups

Educational intervention is performed in the experimental group. In the control group, no intervention will be performed

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization using a random number table in such a way that two rows of rows and columns were arranged from 01 to 50, then by rotating the pencil tip of the selected numbers up to 25 persons were assigned to the control group. The remaining 25 were placed in the test group

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

50 subjects were randomly assigned to randomly assigned to two groups of test and control. The training test group was based on the adaptive pattern
