Iranian Registry of Clinical Trials

13 Jul 2026

Determining efficacy and safety of recombinant growth hormone Somatin® (AryaTinaGene) compared to Norditropin® (Novonordisk) in children with growth hormone deficiency: A non-inferiority phase III randomized parallel clinical trial

Protocol summary

Study aim

Efficacy and safety assessment of AryaTinaGen recombinant Growth Hormone, in comparison with Norditropin in growth hormone deficient children

Design

Parallel non-inferiority phase III, randomized clinical trial

Settings and conduct

This study will be performed on children with growth hormone deficiency in 10 centers located in 14 cities (Tehran, Gorgan, Mashhad, Tabriz, Isfahan, Rasht, Babol, Sari, Kerman, Ahvaz, Karaj, Shiraz, Qazvin and Kermanshah). the main recruitment center is Taleghani hospital in Gorgan. Patients will be recruited according to inclusion and exclusion and complete the informed consent form as well as initial examinations and lab tests (including, hematology and biochemistry tests and wrist x-ray). Then patients will fall into one of the two groups of intervention or control, based on the randomization list. After the first injection, the related measurements will be repeated. Possible adverse events will be also recorded. In both groups, patients undergo clinical examinations and laboratory tests every three months

Participants/Inclusion and exclusion criteria

Inclusion criteria of the study is short stature defined as children who have height standard deviation score (HSDS) < -3SD, Exclusion criteria are hypothyroidism, celiac, seizure, , any chronic systemic disorders such as diabetes mellitus , sleep apnea syndrome, pervious GH replacement therapy, and concomitant use of corticosteroid.

Intervention groups

Intervention group: Biosimilar recombinant growth hormone (Somatin) 35 µg/kg/d, subcutaneous injection.
Control group: Norditropin recombinant growth hormone 35 µg/kg/d, subcutaneous injection

Main outcome variables

Height velocity in the first year after treatment

General information

Reason for update

Changes because of the food and drug administration requirements, updating recruitment centers and actual recruitment dates

Scientific title
 Determining efficacy and safety of recombinant growth hormone Somatin® (AryaTinaGene) compared to Norditropin® (Novonordisk) in children with growth hormone deficiency: A non-inferiority phase III randomized parallel clinical trial

Public title
 Determining efficacy and safety of recombinant growth hormone Somatin® (AryaTinaGene) compared to Norditropin® (Novonordisk) in children with growth hormone deficiency

Purpose
 Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Children older than 2 and younger than 10 for girls and 11 for boys. Short stature with height standard deviation score (HSDS) < -3SD, No increase in growth hormone more than 10 or 20 mIU/L after fasting and clonidine stimulating test Signing the written informed consent by the gradians and assent by children older than 7
Exclusion criteria:
 Any history of using GH or history of using estrogen of adrenal androgens within last year. History of seizure, sleep apnea syndrome or other respiratory disorders. Concomitant use of corticosteroid Any chronic systemic disorders such as hypothyroidism, DM, rickets, skeletal dysplasia, pervious chromosomal abnormalities Sensitivity to GH History of chemotherapy of radiotherapy Children with psychosocial dwarfism or idiopathic or familial short stature Children with idiopathic or familial short stature Spinal disorders such as scoliosis, kyphosis, chiari malformation, spinabifida variations

Age
 From **2 years** old to **11 years** old

Gender
 Both

Phase
 3

Groups that have been masked

- Care provider
- Outcome assessor

Sample size
 Target sample size: **80**
 Actual sample size reached: **80**

Randomization (investigator's opinion)
 Randomized

Randomization description
 Random Chain Generation performed using by (<https://www.sealedenvelope.com>) We used randomized permutations, blocks (the size of each block is 4) for a

total of 80 volunteers (1: 1 ratio). The codes will be labeled on the drugs. After ensuring the volunteer's eligibility and signing the informed consent form, a nurse will receive a code from the study site which will be used for random allocation of the drug to the candidate. The related drug will be used for the volunteer. In this way, the volunteers fall into one of the two intervention groups and the volunteers' group and the type of drug they receive will not be disclosed to researchers or the study team

Blinding (investigator's opinion)

Single blinded

Blinding description

In this clinical trial, blindness can not be fully accomplished (due to the brand's exclusive form of this drug, this is not possible for any study), but we try to minimize the information sources for different individuals in the study to prevent the Information bias. For this purpose, syringes containing both drugs are packaged with code only. Researchers who prescribe medication, those who provide the drug to patients, and those who are responsible for the examination and evaluation of patients, will be unaware of the nature of the syringes, and during this study.

Health conditions studied

1
Description of health condition studied
Short stature due to endocrine disorder
ICD-10 code
E34.3
ICD-10 code description
Short stature due to endocrine disorder

Primary outcomes

1
Description
Body height
Timepoint
Before treatment and 3, 6, 9 and 12 months later
Method of measurement
Using harpenden wall mounted stadiometer

Secondary outcomes

1
Description
Insulin-Like Growth Factor 1 serum level
Timepoint
Before treatment and 6 and 12 months later
Method of measurement
Hematology lab test

2
Description
Insulin-like growth factor-binding protein 3 serum level
Timepoint
Before treatment and 6 and 12 months later
Method of measurement
Hematology lab test

3
Description
bone age wrist
Timepoint
Before treatment and 12 months later
Method of measurement
Left wrist x-ray

4
