Clinical trial The Effect of Probiotic Supplementation in the form of Mouthwash with Scaling and Root planing on the Periodontal Indices in Patients with Generalized Chronic Periodontitis

Protocol summary

Study aim

This study aims to determine the Effect of Probiotic Supplementation in the form of Mouthwash with Scaling and Root planing on the Periodontal Indices in Patients with Generalized Chronic Periodontitis

Design

36 patients with Chronic Generalized Periodontitis will be chosen and will be divided into two equal groups through simple randomization.

Settings and conduct

Probiotic and placebo supplements in the same packages (shape, size, and color that are almost the same). The supplements will be purchased from Milad Faramed company and will be available to patients.

Participants/Inclusion and exclusion criteria

Healthy patients aged 25-59 years old, with a average age of 45.3 years who are diagnosed with chronic periodontitis with at least 4 teeth indicating probing depth (PD) \geq 5 mm, clinical attachment level (CAL) \geq 4 mm will be chosen. include criteria: Patients suffering Chronic Generalized Periodontitis with a degree of Clinical adhesion of CAL \geq 4 who are systemically healthy. Exclude criteria: Patients with any systemic disease, that could affect periodontum disease Sensitivity to probiotic supplements Antibiotic therapies in the last 3 months Pregnant and lactating women Allergic patients to lactate products Patients with inappropriate collaboration (High level of plaque index in the periodic examinations).

Intervention groups

The intervention group after SRP will use probiotic for 20 days by daily solution of two probiotic capsules in 250 cc in water and then will gargle in the mouth for 30 to 60 seconds to increase its local effect on the gum tissue.

Main outcome variables

Measuring the variables (Bleeding on probing, Probing depth, Clinical attachment loss, Plaque index) before scaling, and in the period of one month and three

months after scaling.

Scientific title

Clinical trial The Effect of Probiotic Supplementation in the form of Mouthwash with Scaling and Root planing on the Periodontal Indeces in Patients with Generalized Chronic Periodontitis

Public title

The Effect of Probiotic Supplementation in the form of Mouthwash with Scaling and Root planing on the Periodontal Indeces in Patients with Generalized Chronic Periodontitis

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Patients suffering chronic generalized periodontitis with clinical attachment loss (CAL)≥4 millimeters who are systemically healthy.

Exclusion criteria:

Patients with any systemic disease, that could affect periodontium disease Sensitivity to probiotic supplements Antibiotic therapies in the last 3 months Pregnant and lactating women Allergic patients to lactate products Patients with inappropriate collaboration (High level of plaque index in the periodic examinations)

Age

From **29 years** old to **59 years** old

Gender

Both

Phase

3

Groups that have been masked

- Participant
- Investigator

Sample size

Target sample size: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization. In this study, patients are assigned to one of two study groups using the random number table.

Blinding (investigator's opinion)

Double blinded

Blinding description

Probiotic and placebo supplements are in the same packages (shape, size, and color that are almost the same). The supplements will be purchased from Milad Pharmed company and will be available to patients.

Health conditions studied

1

Description of health condition studied

The effect of probiotic supplementation in the form of mouthwash with scaling and root planing on the periodontal indeces in patients with generalized chronic periodontitis

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Clinical attachment level (CAL)

Timepoint

Before the intervention , one months after initiating the intervention and three months after initiating the intervention.

Method of measurement

measurement of the distance between the stent margin to the sulcus base by means of a periodontal probe.

2

Description

Plaque index (PI)

Timepoint

Before the intervention , one months after initiating the intervention and three months after initiating the intervention.

Method of measurement

By disclosing agent with visual scale.

3

Description

Bleeding on probing (BOP)

Timepoint

Before the intervention , one months after initiating the intervention and three months after initiating the intervention.

Method of measurement

Bleeding in 15 seconds after gentle probing by periodontal probe.

4

Description

Probing depth (PD)

Timepoint

Before the intervention , one months after initiating the intervention and three months after initiating the intervention.

Method of measurement

The distance between the mucosal margin and the sulcus base by periodontal probe in millimeters.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The intervention group after SRP will use probiotic for 20 days by daily solution of two probiotic capsules in 250 cc water and then will gargle in the mouth for 30 to 60 seconds to increase its local effect on the gum tissue.

Category

Treatment - Other

2

Description

The control group after SRP will use placebo (drinking water that has been established in terms of chemical compounds).

Category

Placebo
