Implementation and Evaluation of Heart Failure Patients Discharge Plan

Protocol summary

Study aim

Implementation and Evaluation of Heart Failure Patients Discharge Plan

Design

The present study is an interventional, before and after study. The discharge plan is implemented for heart failure patients and the variables are compared before and after the study. The sample size was 26 patients.

Settings and conduct

This study is conducted in Shahid Rajaie Cardiovascular Medical and Research Center for 3 months. The discharge plan will be implemented for patients who have criteria for entering the study. The questionnaires are completed and compared before the program starts and 3 months after its implementation.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1) Patient with heart failure 2) aged 18 or over. 3) live in Tehran. 4) Satisfaction to participate in the study. 5) Have a history of admission more than 1 time within the past 6 months Exclusion criteria: 1) The patient has undergone cardiac surgery for the last 8 weeks 2) myocardial infarction In the last 4 weeks 3) cardiogenic shock In the last 4 weeks

Intervention groups

This study is part of an action research study. A discharge plan designed for patients with heart failure will be implemented and evaluated.

Main outcome variables

Self-care behavior; quality of life; depression; psychological burden of care; number of admissions; number of admission days

Description of health condition studied

Heart Failure

ICD-10 code

I50.9

ICD-10 code description

Heart failure, unspecified

Primary outcomes

1

Description

self-care behavior

Timepoint

Before the start of the discharge plan and 3 months after the discharge plan

Method of measurement

European Heart Failure Self-care Behaviour scale

2

Description

Quality of life

Timepoint

Before the start of the discharge plan and 3 months after the discharge plan

Method of measurement

The Minnesota Living with Heart Failure Questionnaire

3

Description

Depression

Timepoint

Before the start of the discharge plan and 3 months after the discharge plan

Method of measurement

Cardiac Depression Scale

4

Description

psychological burden of care

Timepoint

Before the start of the discharge plan and 3 months after the discharge plan

Method of measurement

Zarit Burden Interview

5

Description

number of hospitalization

Timepoint

Before the start of the discharge plan, 1 month and 3 months after the implementation of discharge plan

Method of measurement

Registration form for the hospitalization of a patient with heart failure in a hospital

6

Description

hospital days

Timepoint

Before the start of the discharge plan, 1 month and 3 months after the implementation of discharge plan

Method of measurement

Registration form for the hospital days of a patient with heart failure in a hospital

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: The study is an interventional type before and after. For patients enrolled in the study, the discharge plan includes three areas: patient empowerment, home visit after discharge, and post-discharge telephone follow-up implemented for three months, and the outcome variables are compared before and after the implementation of the program.
