Study the effect of acetaminophen prophylaxis on ductus arteriosus closure in premature infants under 31 weeks

Protocol summary

Study aim

The aim of this study is to investigate the effect of acetaminophen prophylaxis on ductus arteriosus closure in premature infants under 31 weeks.

Design

Randomized clinical trials with control group, community based and pragmatic with parallel groups, non blinded

Settings and conduct

In this study, 64 premature infants admitted to the neonatal intensive care unit of Shahrekord Hajar hospital were enrolled in the study, using convenience sampling method.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Premature infants admitted to the neonatal intensive care unit, weight under 1500 grams and age under 31 weeks; In addition infants with congenital heart defects, congenital major abnormalities or chromosomal abnormalities, Apgar scores greater than 5 at five minutes after birth, symptomatic PDA require treatment with ibuprofen, vomiting or hematemesis in the first three days of birth, high levels of liver enzymes; infants with hydrops fetalis; infants whose mothers have a history of using nonsteroidal anti-inflammatory drugs during pregnancy; prevented from being enrolled in the study.

Intervention groups

Patients will be divided into two groups (intervention and control). The intervention group will receive acetaminophen prophylaxis (10 mg/ kg body weight every 6 hours for 5 days as drops). The control group will not receive any intervention. After 10 days, both groups will undergo echocardiography. In the case of ductus arteriosus, patients will receive the usual treatment (ibuprofen) and again after 1 month echocardiography will be done.

Main outcome variables

Ductus arteriosus condition

Scientific title

Study the effect of acetaminophen prophylaxis on ductus arteriosus closure in premature infants under 31 weeks

Public title
Effect of acetaminophen prophylaxis on ductus arteriosus closure in premature infants

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Premature infants admitted to the neonatal intensive care unit Weight under 1500 grams Age under 31 weeks
Exclusion criteria:
 Infants with congenital heart defects, congenital major abnormalities or chromosomal abnormalities Infants whose mothers have a history of using nonsteroidal anti-inflammatory drugs during pregnancy Infants with hydrops fetalis Infants with Apgar scores greater than 5 at five minutes after birth Infants with symptomatic PDA require treatment with ibuprofen Infants have vomiting or hematemesis in the first three days of birth Infants with high levels of liver enzymes

Age
To **210 days** old

Gender
Both

Phase
3

Groups that have been masked
No information

Sample size
Target sample size: **64**

Randomization (investigator's opinion)
Randomized

Randomization description
Sampling will be done by convenience method and numbers from 1 to 64 will be assigned to infants based on enrollment order. Infants will be randomly allocated to two intervention and control groups using Random Number Generation (RNG) software. Information such as sample size, study population and number of study groups will be recorded in the software. The software will generate two groups of random numbers for intervention (n: 32) and control (n: 32) groups, according to which allocation will be done.

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment
Parallel

Health conditions studied

1

Description of health condition studied

Delayed closure of ductus arteriosus

ICD-10 code

P29.3

ICD-10 code description

Persistent fetal circulation

Primary outcomes

1

Description

Ductus arteriosus status

Timepoint

Ten and thirty days after intervention

Method of measurement

Echocardiography

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: This group will receive acetaminophen prophylaxis 10 mg/ kg body weight, every 6 hours for 5 days as drops.

Category

Treatment - Drugs

2

Description

Control group: This group will not receive any medical treatment.
