

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

10 Jun 2026

### The effect of squill Oil on the dyspareunia and sexual satisfaction in menopause women

#### Protocol summary

##### Study aim

the Effect of Squill Oil on the Dyspareunia and Sexual Satisfaction in Menopause Women

##### Design

A clinical trial with a control group, with a parallel, blind, randomized clinical trial. Random Type: Simple by using odd and even numbers. Sample size based on estimation with a power of 90% and a 95% confidence coefficient of 26 were calculated for each group, with a probability of 20% of the sample drop, 30 people in each group were considered

##### Settings and conduct

Qualified samples referring to health canters are randomly divided into two groups. Oils have similar appearance and they are placed into similar boxes by Pharmacist. Only after the end of the study, the name and characteristic of the subject that is written on the box will be revealed. The researcher, supplier, data collector, and data analysis will not be informed of the type of intervention received.

##### Participants/Inclusion and exclusion criteria

45-65year, complaining of dyspareunia. Exit criteria: Vaginal infection (bacterial vaginosis, trichomonas), any major genital disease (PID, uterine prolapse, cystocele, rectocele), hormone therapy, use of phytoestrogen drugs.

##### Intervention groups

In the intervention group for 4 weeks, 1 to 3 times a week, and 5 minutes before having sex, 3 cc (equivalent to one teaspoon) should be rubbed gently and roundly on clitoral area and vagina. In the control group, olive oil for 4 weeks, 1 to 3 times a week and 5 minutes before having sex, 3 cc (equivalent to one teaspoon) should be rubbed gently and roundly on clitoral area and vagina.

##### Main outcome variables

The primary outcome is dyspareunia and the secondary outcome is sexual satisfaction that measured by the relevant questionnaires. Time point: Before intervention, 4 weeks after the intervention.

##### Scientific title

The effect of squill Oil on the dyspareunia and sexual

satisfaction in menopause women

### Public title

The effect of Squill Oil on the dyspareunia and sexual satisfaction in menopause women

### Purpose

Treatment

### Inclusion/Exclusion criteria

#### Inclusion criteria:

Giving a written consent Having literacy Being Iranian and living in Mashhad Age 45 to 65 years Married and having an intact marriage Do not have chronic medical history that affect on sexual function Having sex Pass at least one year from the last menstruation Complaints from the dyspareunia (earning at least one rating based on the Marinf scale score)

#### Exclusion criteria:

Vaginal infection (vaginose bacteriana, trichomonas) Any major diseases of the genital tract (PID, uterine prolapse, cystocele, rectocele) Hormone therapy or sexual hormones consumption within 8 weeks before the study Smoking and Alcohol Women with uterine bleeding or spotting and the high consumption of other phytoestrogenic drugs (soy, red clover, fenugreek, Vitex agnus) over the past month

### Age

From **45 years** old to **65 years** old

### Gender

Female

### Phase

3

### Groups that have been masked

- Participant
- Care provider
- Data analyser

### Sample size

Target sample size: **60**

### Randomization (investigator's opinion)

Randomized

### Randomization description

Envelopes will be prepared and printed by a member of the research team and random numbers with the help of Randomize.com and will be placed inside the envelope. The envelopes will be closed and its contents are not visible from the outside. Then, the purpose of the study is explained to the person who follows the conditions, and the person, if desired, signs the informed consent form and removes an envelope, then opens it and, based on the contents of the envelope, enters into the intervention or control group.

### Blinding (investigator's opinion)

Triple blinded

### Blinding description

The preparation of the envelopes will be done by the person not involved in the collection and analysis of the data. In this way, the participants, prescriber, data collector and data analyzer will not be aware of the type of intervention received.

### Placebo

Used

### Assignment

Parallel

### Other design features

## Secondary Ids

empty

## Ethics committees

### 1

#### Ethics committee

##### Name of ethics committee

Ethics committee of Mashhad University of Medical Sciences

##### Street address

Mashhad Faculty of Nursing and Midwifery, Ebne Sina St, Doktora Crossroads

##### City

Mashhad

##### Province

Razavi Khorasan

##### Postal code

## Health conditions studied

### 1

#### Description of health condition studied

dyspareunia

#### ICD-10 code

N94.1

#### ICD-10 code description

Dyspareunia

## Primary outcomes

### 1

#### Description

dyspareunia

#### Timepoint

Before intervention and 4 weeks after the intervention

#### Method of measurement

Marinf dyspareunia scale

### 2

#### Description

sexual satisfaction

#### Timepoint

Before intervention and 4 weeks after the intervention

#### Method of measurement

sabbatsberg sexual satisfaction questionnaire

## Secondary outcomes

empty

## Intervention groups

### 1

#### Description

Intervention group: for 4 weeks, 1 to 3 times a week, and 5 minutes before having sex, 3 cc (equivalent to one teaspoon) should be rubbed gently and roundly on clitoral area and vagina

#### Category

Treatment - Drugs

### 2

#### Description

Control group: olive oil for 4 weeks, 1 to 3 times a week and 5 minutes before having sex, 3 cc (equivalent to one teaspoon) should be rubbed gently and roundly on clitoral area and vagina

#### Category

Treatment - Drugs
