

Clinical Trial Protocol

Iranian Registry of Clinical Trials

19 Sep 2026

One year comparison of effectiveness and complication of rituximab and fingolimod in multiple sclerosis (MS)patients

Protocol summary

Study aim

Comparison of the effectiveness and complication of rituximab and fingolimod in patients with Multiple Sclerosis

Design

This study is single-blinded clinical trial. The study population will be included all patients with M Multiple Sclerosis referring to Imam Reza hospital of Kermanshah. 36 eligible patients will be selected conveniently and randomly assigned to two intervention groups.

Settings and conduct

This study which will be conducted in Imam Reza hospital of Kermanshah city is one-blinded one, that clinical carer will be kept blind to the allocation of study groups. At beginning of the study the motor disability and their MRI status is recorded. Patients undergo cardiac monitoring and frequent visits during rituximab and fingolimod infusion.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Age between 18-55 years; Negative Pregnancy test in women of reproductive age; At least one relapse in the past year, despite First-line Dimethyltryptamine treatment; At least two relapse in the past two years, despite First-line Dimethyltryptamine treatment; Active lesions and having two or more attacks in the past year despite the first-line treatment in recurrent patients. Exclusion criteria: Acute or chronic bacterial, viral or fungal infection; Breastfeeding and pregnancy; Sensitivity to drug; History of systemic diseases other than Multiple Sclerosis

Intervention groups

The first intervention group will receive 1000 mg of rituximab. The injection will take about 6 hours, the second dose will be two weeks later, and then every 6 months for one year. The second intervention group will receive 0.5 mg of fingolimod capsules, then a daily oral administration of a fingolimod capsule for a minimum of 12 months will be prescribed.

Main outcome variables

Disability motion; Medicine complications; Relapse of the disease

Scientific title
One year comparison of effectiveness and complication of rituximab and fingolimod in multiple sclerosis (MS)patients

Public title
Comparison of effectiveness and complication of rituximab and fingolimod in improvement disability motion

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria:
 Age between 18-55 years Negative pregnancy test in women of reproductive age At least one relapse in the past year, despite first-line Dimethyltryptamine treatment At least two relapse in the past two years, despite First-line Dimethyltryptamine treatment Active lesions (a new Type2 (T2) or Gadolinium(GAD) enhancement) and having two or more attacks in the past year despite the first-line treatment in recurrent patients Active lesions (new T2 lesions or GAD enhancement) and attack in patients who have the progressive form of illness
Exclusion criteria:
 Acute or chronic bacterial, viral or fungal infection Sensitivity to drug

Age
From **18 years** old to **55 years** old

Gender
Female

Phase
3

Groups that have been masked

- Care provider

Sample size
Target sample size: **36**

Randomization (investigator's opinion)
Randomized

Randomization description
Randomly Individually by random number table via code receipt. In this way, 36 cards which are identical in appearance will be provided and 18 of them are code 1, which specifies the intervention group, and the other are code 2, which specifies the control group. Then, anyone who is eligible to enter the study, randomly will select one of these cards (Participants will not be aware of the the type of intervention that will be assigned).

Blinding (investigator's opinion)
Single blinded

Blinding description
In this study, clinical carer will be blinded to the study groups, the dosage of the drug and the manufacturer of the drug

Placebo
Not used

Health conditions studied

1

Description of health condition studied
Multiple Sclerosis

ICD-10 code
G35

ICD-10 code description
Multiple sclerosis

Primary outcomes

1

Description
Disability motion

Timepoint
At the beginning of the study and one year after the study

Method of measurement
Base on Expanded Disability Scale Score(EDSS)

2

Description
Medicine complications

Timepoint
Start and during treatment

Method of measurement
Doctor observation and asking from patient

3

Description

Relapse of the disease

Timepoint

Annually

Method of measurement

Diagnosis of the doctor

Secondary outcomes

empty

Intervention groups

1

Description

The first intervention group will receive 1000 mg of rituximab (manufactured by Takgene company) by injection. The injection will take about 6 hours, the second dose will be two weeks later, and then every 6 months for one year.

Category

Treatment - Drugs

2

Description

The second intervention group will receive 0.5 mg of fingolimod capsules (manufactured by Alhavi company). Then a daily oral administration of a fingolimod capsule for a minimum of 12 months will be prescribed.

Category

Treatment - Drugs
