The effect of educational program on understanding the uncertainty of disease and anxiety in mothers of children with febrile convulsion in the paediatric ward of Imam Ali Hospital in Zahedan in 2017

Protocol summary

Study aim

The effect of educational program on understanding the uncertainty and anxiety of mothers in febrile seizure in pediatric ward of Imam Ali Hospital in Zahedan, Iran.

Design

Clinical trials with intervention and control group, with parallel groups, Not blind, randomized

Settings and conduct

Mothers of children with febrile seizure in the pediatric wards of Imam Ali Hospital in Zahedan participated in this study. Qualified individuals were classified into intervention and control groups. The intervention group received educational content, but the control group received routine care.

Participants/Inclusion and exclusion criteria

Entry requirements: 1. There is no other illness other than seizure associated with fever. 2. The mother is not a hospital staff. 3. Have a child admitted at the age of 6 months to 6 years of age with seizure. 4. The mother has no history of anxiety and depression disorders or the mother is not being treated with psychiatric drugs. 5. The first childhood admission. Non-arrival conditions: Did not attend more than one session.

Intervention groups

In this research, the samples were available from the mothers of children with febrile seizure in the pediatric wards of Zahedan hospitals who had the conditions to enter the study, then the first group as an intervention group and then the control group of the sample. They were The intervention group received educational content during 3 sessions, but the control group received routine care.

Main outcome variables

1- The anxiety of mothers of seizure-induced febrile seizure in pediatric ward of Imam Ali Hospital in Zahedan city 2. Uncertainty of maternal diseases in children with febrile convulsion in the pediatric ward of Imam Ali

Hospital in Zahedan

Intervention groups

1

Description

Intervention group: The onset of intervention begins at the time of admission and after admission. The training intervention will be designed to provide educational content based on educational objectives and with the use of a pediatric pediatric neurologist, which includes a simple definition of febrile seizure, causes, prevalence, symptoms, probability Recurrence, prognosis and treatment and drug therapy, prevention methods, diagnostic methods, methods for controlling fever, feeding and educating the mother when discharge is an anxiety control way. The intervention includes: Individual training and providing a training booklet and providing a training CD for seizure control and a practical demonstration of the child's body temperature with a thermometer and a practical demonstration of spitting. And the duration of the training will be given to the mothers for at least 30 minutes to 45 minutes, individually and face-to-face with questions and answers within the department. The number of sessions in this section will be based on the patient's requirements and conditions three times a day and one Meanwhile, three sessions were considered in one week. The time of the session is after admission. The place of intervention in theoretical debates in the classroom and in practical discussions on the patient's bedside (in the condition of a mother's relaxation and admission conditions). The educator will be a researcher. The researcher also provided the intervention group's mothers with their telephone number to contact the researcher if they had a question and the researcher would follow them up for a month. The questionnaires will be filled in by the mothers before and after the intervention in both intervention and control groups and immediately after the intervention and after one month follow up after discharge (by telephone and coordination with the mother). Training sessions are as follows: Session 1: Introducing the researcher, providing a simple definition of febrile seizure, causes, prevalence, symptoms, relapse, prognosis and treatment, and drug therapy. Session 2: Prevention Methods, Diagnostic Methods, Fever Control Methods, Maternal Education When Dispensing. Session Three: Anxiety Control Ways
