

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

The effect of massage of organs on postoperative pain, A double blind randomized clinical trial with a control group

Protocol summary

Study aim

The effect of massage of limbs on postoperative pain

Design

A clinical trial with a control group, with parallel groups, double blind, randomized

Settings and conduct

Patients are divided into intervention and control groups by means of four-way blocked blocks. Patients in the intervention group will receive half an hour massage in their hands and legs before surgery and during surgery. Physician, researcher and data analyst will be blind during the study.

Participants/Inclusion and exclusion criteria

Surgical length more than two hours Satisfaction to participate in the study

Intervention groups

Patients in need of surgery will receive half an hour massage in their legs and hands before and during surgery.

Main outcome variables

pain

Scientific title

The effect of massage of organs on postoperative pain, A double blind randomized clinical trial with a control group

Public title

Effect of massage on pain relief

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria:

Need more than two hours surgery Satisfaction to participate in the study

Exclusion criteria:

History of inflammatory diseases Taking analgesic drugs Having nervous system diseases Taking sedative drugs

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

- Care provider
- Investigator
- Data analyser

Sample sizeTarget sample size: **300****Randomization (investigator's opinion)**

Randomized

Randomization description

In the form of quadruple blocks The randomization unit will be individualized

Blinding (investigator's opinion)

Triple blinded

Blinding description

Doctor, researcher, and data analyst will not be present during the intervention.

Placebo

Not used

Assignment

Parallel

Health conditions studied**1****Description of health condition studied**

Pain

ICD-10 code**ICD-10 code description****Primary outcomes****1****Description**

Pain

Timepoint

At the beginning of the study, 2, 4, 6, 12, 24 hours after the massage

Method of measurement

VAS pain intensity check list

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: Patients will receive massage at their hands and feet for half an hour before starting surgery (Includes all spine surgery, All Heart Surgery, all thoracic surgery, all orthopedic surgeries). During surgery, they will receive massage for half an hour in all organs.

Category

Prevention

2**Description**

Control group: No action will be taken before and during surgery for this group.

Category

Placebo
