Investigating of the Effect of Motor Correction Exercises on the Severity of Pain and Disability in Patients with Chronic Low Back Pain

Protocol summary

Study aim

The purpose of this study was to determine the effect of motor correction exercises using the mirror therapeutic approach on the severity of pain and disability in patients with chronic low back pain.

Design

A clinical trial with a control group, one blind, randomized, with a sample size of 72 people

Settings and conduct

After obtaining written consent, the patients referred to the medical centers of Ahvaz Jundishapur University were selected based on entry criteria and randomly assigned to two therapeutic group (36 patients) and control (36) randomly selected blocks. To be All patients were unaware of which part of their treatment was intended for this study, and there was no relationship between the two groups. All patients undergo a routine clinical rehabilitation program. During the same period of 10 weeks, the analgesic group after routine physiotherapy is undergoing therapy in a quiet and silent environment for 30 minutes. All exercises are performed by a researcher and a researcher (female) 3 sessions Weekly for 10 weeks.

Participants/Inclusion and exclusion criteria

The criteria for entering the study include chronic non-specific chronic low back pain, age range 18 to 65, and the ability to exercise. Non-inclusion criteria include having weakness in exercise, smoking and alcohol consumption, and lack of satisfaction to enter the study.

Intervention groups

in front of the mirror for control group : 1. Spinal stabilizer exercise sitting on the ball 2. Spinal stabilizer exercise sitting without balls 3. Standing spinal stabilizer training The control group also deals only with routine physical therapy exercises.

Main outcome variables

reduce Severity of pain : Severity of disability

Scientific title

Investigating of the Effect of Motor Correction Exercises on the Severity of Pain and Disability in Patients with Chronic Low Back Pain

Public title

The Effect of Motor Correction Exercises on the Severity of Pain and Disability in Patients with Back Pain

Purpose

Supportive

Inclusion/Exclusion criteria**Inclusion criteria:**

Non-specific chronic low back pain confirmed by the physician Age range 18 to 65 years Ability to do sports movements

Exclusion criteria:

weakness in exercise smoking alcohol consumption lack of satisfaction to enter the study

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

1-2

Intervention groups

1

Description

Test group: In this study, the test group carries 3 sessions of routine physiotherapy for 10 weeks and each week. The test group follows the routine physiotherapy, in the front of the desired workout mirror, which includes the spinal stabilization training on the ball, the stabilization of the spine without a ball and the stabilization of the spine, by the researcher (Physiotherapist has seen the necessary training).

Category

Rehabilitation

2

Description

Control group: Routine physiotherapy exercises for 10 weeks and 3 sessions per week.
