The effectiveness of stress inoculation training on individual sense of coherence and psychological distress in pregnant women

Protocol summary

Study aim

The aim of the present study will be examining the training of immunization against the stress on the individual's sense of cohesion and the psychological distress in pregnant women

Design

This study is a nonblinded clinical trial. The research population will be included all pregnant women referred to Imam Sari hospital. 30 pregnant women will be selected conveniently and randomly assigned to two intervention groups.

Settings and conduct

The study will be conducted in Imam Sari hospital. The control group and the experimental group will complete psychological distress and sense of coherence questionnaire.

Participants/Inclusion and exclusion criteria

Entry requirements to study would be to earn a score down in the individual sense of cohesion and earn a high score on the scale of psychological distress

Intervention groups

The experimental group was given a stress inoculation training about 8 sessions, once a week for 90 minutes and the control group did not receive training

Main outcome variables

psychological distress and sense of coherence
