

Clinical Trial Protocol

Iranian Registry of Clinical Trials

29 Jun 2026

A comparative study on the therapeutic effect of combined phototherapy and oral Simvastatin with phototherapy alone in patients with vitiligo

Protocol summary

Study aim

Determination of the effect of photo-therapy plus Simvastatin tablet in comparison with photo-therapy plus placebo in the treatment of patients with vitiligo referred to Shahid Faghihi Dermatology Clinic

Design

Two arm parallel group randomized clinical trial, double blinded

Settings and conduct

Samples include the patients with vitiligo who refer to the Shahid Faghihi Dermatology Clinic. In order to blind the investigator and patients, medications are named as "A" for Simvastatin tablet and B for placebo.

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1- Patients with vitiligo, 2- Involving more than 20% of the body surface, 3- Age above 14 years old. Exclusion criteria: 1- Patients with systemic diseases, 2- Patients who use other therapeutic methods except photo-therapy, 3- Patients with any liver diseases, 4- Patients with any kidney diseases, 5- Pregnant and lactating women, 6- History of allergy to photo-therapy, 7-Taking medication that has interactions with Simvastatin.

Intervention groups

Intervention group: the initial dose of phototherapy used in every patient is 100 mJ/cm² and the energy is increased by 10 mJ/cm² after every dose. The number of treatment sessions of phototherapy has been also determined three times a week. The dose of Simvastatin (manufactured by Pursina Company) is 20 mg with the protocol of the 2 times a day in the first month, 3 times a day in the second month, and 2 tablets twice a day in the third and fourth months. Control group: the initial dose of phototherapy used in every patient is 100 mJ/cm² and the energy is increased by 10 mJ/cm² after every dose. The number of treatment sessions of phototherapy has been also determined three times a week. The dose of placebo (manufactured by Shiraz School of Pharmacy) is similar to dose of prescribed Simvastatin.

Main outcome variables

The amount of melanin pigment in the skin

Scientific title

A comparative study on the therapeutic effect of combined phototherapy and oral Simvastatin with phototherapy alone in patients with vitiligo

Public title

The effect of phototherapy and oral Simvastatin in treatment of vitiligo

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

The patients with vitiligo Age above 14 years old

Exclusion criteria:

Patients with systemic diseases Patients who use other therapeutic methods except light therapy Patients with any liver disease Patients with any kidney disease Pregnant and lactating women History of allergy to phototherapy Taking medication that has interactions with simvastatin

Age

From **14 years** old

Gender

Both

Phase

2-3

Groups that have been masked

- Participant
- Care provider
- Investigator
- Data analyser

Sample size

Target sample size: **50**

Actual sample size reached: **50**

Randomization (investigator's opinion)

Randomized

Randomization description

Random allocation software Ink was used to create a randomization table

Blinding (investigator's opinion)

Double blinded

Blinding description

In order to blind the investigator, medications were named A (simvastatin tablet) and B (Placebo). The patients were not aware of which drug they received. The groups were also coded A and B to the statistical analyzer

Placebo

Used

Assignment

Parallel

Other design features**Secondary Ids**
