

Clinical Trial Protocol

Iranian Registry of Clinical Trials

10 Jun 2026

The effect of sexual counseling based on BETTER model on sexual function of infertile women.

Protocol summary

Study aim

(GENERAL OBJECTIVES):Determining the effect of sexual counseling based on BETTER model on sexual function of infertile women.(SPECIFIC OBJECTIVES):1- Determination and comparison of the mean of sexual function score in infertile women before and two months after the intervention in the intervention group. 2. Determination and comparison of mean sexual function score in infertile women before and two months after intervention in control group. 3. Determination and comparison of mean sexual performance score in infertile women before and two months after intervention in two intervention and control groups. 4. Determining the relationship between marital satisfaction and sexual function.

Design

Randomized, controlled clinical trial, in parallel with a control group

Settings and conduct

This study was performed on 80 infertile women who referred to the Infertility Center of Karaj and infertility center of Taleghani Hospital in Tehran. Samples are randomly distributed from each center (40 people per center) based on entrance criteria and randomly assigned to each intervention and control group.

Participants/Inclusion and exclusion criteria

Age between 20 - 45 years Married and living with a spouse At least 6 months have passed since infertility diagnosis Primary infertility Do not have a adopted child Iranian nationality Spoken in farsi having at least middle School degree Having at least one sexual problem based on a short screening form

Intervention groups

40 infertile women entered the study according to entry criteria. For each person, two sexual counseling sessions will be held on a weekly basis.Each counseling session will take about 60-90 minutes. Data were collected before and two months after the intervention with demographic forms, the female sexual function index and Enrich marital satisfaction questionnaire.

Main outcome variables

sexual function
