Investigation on the Effect of Iranian Carrot Syrup (Parsnip) on Female Sexual Dysfunction: A Triple Blind Clinical Trial

Protocol summary

Study aim

Determining of the Effect of Iranian Carrot Syrup (Parsnip) on Female Sexual Dysfunction

Design

This clinical trial study was triple blind and 72 patients who have inclusion criteria will divide two groups (intervention and placebo) by Block random sampling ,by factorial manner.

Settings and conduct

The target population includes all women with sexual dysfunction referred to public health clinics affiliated to Arak University of Medical Sciences. In this study, 72 patients who have inclusion criteria will divide two groups (intervention and placebo) by Block random sampling. patients with severe depression, they will be excluded from the study by completing the Persian form of Beck Depression Inventory at the beginning of the study. After that, interviews with patients and after completing the FSFI questionnaire, they randomly receive the drug / placebo. The drug is given at 10 cc in the morning and 10 cc in the evening and the placebo is given in the same way for 4 weeks. For placebo, Stevia syrup is used. After regular use of the medication, the sexual function status of patients is again determined by the aforementioned questionnaire. The study is three-blind, and the patient, researcher and information analyst are not aware of the use of drugs or placebo .

Participants/Inclusion and exclusion criteria

Inclusion Criteria: -Sexual dysfunction in 6 independent areas, Age range 18 to 40 years, Married , sexually active:
Non-inclusion criteria: Severe depression in the patient, pregnancy, history of skin sensitivity to herbs in the family of Chattan, use of a drug affecting desire or sexual function , consuming energy drinks and consuming Drugs,...

Intervention groups

Parsynip syrup is given at 10 cc in the morning and 10 cc in the evening and the placebo is given in the same way for 4 weeks.

Main outcome variables

Sexual function
