Comparing Medial rectus Advancement Using Non absorbable versus Absorbable Suture in patients with Consecutive Exotropia

Protocol summary

Study aim

To compare non absorbable and absorbable suture in patients with consecutive exotropia that undergo medial rectus muscle advancement.

Design

Two arm parallel group randomised and single blinded trial with blind postoperative care and outcome assessment

Settings and conduct

This study is conducted at Farabi Eye Hospital- Tehran University of Medical Sciences. The person, who will measure preoperative and postoperative angle of deviation will be kept blind.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Angle of consecutive exotropia more than 15 prism diopter; Consecutive exotropia cases that need single medial rectus advancement. Exclusion criteria: History of neurologic problems; Significant vertical deviation; Less than 4 months passed from previous surgery.

Intervention groups

In group 1 (case) medial rectus muscle advancement using non absorbable suture is applied. In group 2 (control) medial rectus muscle advancement using absorbable suture is considered.

Main outcome variables

Deviation, XT or ET

Scientific title

Comparing Medial rectus Advancement Using Non absorbable versus Absorbable Suture in patients with Consecutive Exotropia

Public title

Consecutive exotropia treatment

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Consecutive exotropia following medial rectus recession

consecutive exotropia > 15 PD consecutive exotropia cases that need single medial rectus advancement

Exclusion criteria:

History of neurologic problems
Significant vertical deviation
Less than 4 M passed from previous surgery
Positive forced duction test

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

- Outcome assessor

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Randomized

Randomization description

Method of randomization is permuted block randomization. The blocks of size 2, 4 and 6 will be used.

Blinding (investigator's opinion)

Single blinded

Blinding description

The study is single blinded. The person who assesses outcomes will be kept blind.

Placebo

Health conditions studied

1

Description of health condition studied

Consecutive exotropia

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

postoperative angle of deviation

Timepoint

3 months and 6 months

Method of measurement

Prism

Secondary outcomes

1

Description

recurrence of angle of deviation

Timepoint

Before surgery, 1 week, 3 months and 6 months after surgery

Method of measurement

Prism

Intervention groups

1

Description

Intervention group: medial rectus muscle advancement using nonabsorbable suture (Mersiline 6-0)

Category

Treatment - Surgery

2

Description

Control group: medial rectus muscle advancement using absorbable suture (vicryl 6-0)

Category

Treatment - Surgery
