

Clinical Trial Protocol

Iranian Registry of Clinical Trials

09 Jun 2026

Determination of specific antibody titre against Pneumococcus and its relation with recurrent infection in patients with ataxia-telangiectasia and IgA deficiency

Protocol summary

Study aim

- Determination of specific antibodies titre against pneumococcus in patients - Comparison of clinical manifestations and immunological data in patients with or without defect in specific antibodies production against pneumococcus

Design

Without control group

Settings and conduct

1. Select of patients diagnosed with selective IgA deficiency and ataxia-telangiectasia based on defined criteria 2. Completing questionnaire containing demographic, clinical manifestations and immunological data Method: 1. We will obtain a sample of 10-5 ml of blood sample of selected patients 2- A 0.5-milliliter dose of non-conjunctiva pneumococcal polyvalent vaccine (PNEUMO 23® Aventis, Pasteur, France) will inject in all patients. 3- Three weeks after pneumococcal vaccination, we will take 10-5 ml of blood of selected patients 4- specific antibody titre against pneumococcal will measure before and after vaccination by ELISA method 5- According to the specific antibody response to pneumococci, the patients will be classified into two groups and their relationship with the presence or absence of specific antibody response against pneumococci in patients with recurrent infections will be evaluated.

Participants/Inclusion and exclusion criteria

Patients diagnosed with selective IgA deficiency and ataxia-telangiectasia based on defined criteria

Intervention groups

All patients receive a 0.5-milliliter dose of non-conjunctiva pneumococcal polyvalent vaccine (PNEUMO 23® Aventis, Pasteur, France).

Main outcome variables

Defect in production of specific antibodies titre against pneumococcus in patients with ataxia-telangiectasia and

selective IgA deficiency could be related to manifestation of recurrent infections

Scientific title

Determination of specific antibody titre against Pneumococcus and its relation with recurrent infection in patients with ataxia-telangiectasia and IgA deficiency

Public title

Evaluation of specific antibody titre against Pneumococcus in patients with Ataxia-telangiectasia and IgA deficiency

Purpose

Health service research

Inclusion/Exclusion criteria

Inclusion criteria:

Patients diagnosed with selective IgA deficiency and ataxia-telangiectasia based on defined criteria

Exclusion criteria:

Age

No age limit

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: 100

Randomization (investigator's opinion)

N/A

Randomization description

Blinding (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Ataxia-telangiectasia

ICD-10 code

G11.3

ICD-10 code description

Cerebellar ataxia with defective DNA repair

2

Description of health condition studied

IgA deficiency

ICD-10 code

D80.2

ICD-10 code description

Selective deficiency of immunoglobulin A [IgA]

Primary outcomes

1

Description

Ataxia-telangiectasia

Timepoint

Before intervention

Method of measurement

According to the ESID diagnostic criteria

2

Description

IgA deficiency

Timepoint

Before intervention

Method of measurement

According to the ESID diagnostic criteria

3

Description

Sex

Timepoint

Before intervention

Method of measurement

Questionnaire

4

Description

Age

Timepoint

Before intervention

Method of measurement

Questionnaire

Secondary outcomes

1

Description

Determination of the pneumococcus specific antibodies level

Timepoint

Before and after intervention

Method of measurement

ELISA

Intervention groups

1

Description

One-half-milliliter dose of non-conjugate pneumococcal polyvalent vaccine (PNEUMO 23® Aventis, Pasteur, France)

Category

Treatment - Drugs
