Iranian Registry of Clinical Trials

01 Jun 2026

Comparison of the frequency of acute hemolysis induced nephropathy in patients with glucose 6 phosphate dehydrogenase deficiency treated with 3 different therapeutic fluid treatments

Protocol summary

Study aim

The aim of this study is to determine the frequency of nephropathy-induced by acute hemolysis in patients with glucose-6-phosphate dehydrogenase deficiency treated with 3 different fluid therapy methods.

Design

A clinical trial with a control group, with parallel-group, randomized, 132 patients, phase 3

Settings and conduct

In this randomized double-blind clinical trial study, infants and children aged 3 months to 18 years with acute hemolysis due to G6PD deficiency admitted to Shahrivar Hospital in Rasht in 1398 requiring at least 24 hours fluid therapy and hospitalization for follow-up will be studying for 24 to 72 hours.

Participants/Inclusion and exclusion criteria

Inclusion criteria: age 3 months to 18 years, urinary hemoglobin more or equal to + 2, need to receive intravenous fluids for at least 24 hours, acute hemolysis caused by favism or G6PD deficiency, hospitalization for 24 to 72 hours Exclusion criteria: Patients will be excluded if any of the following adverse events occur: sodium levels below 130 and above 150, neurological symptoms of hyponatremia, symptoms of fluid retention and general puffiness, Oligo Anuric renal failure

Intervention groups

Intervention group 1: Receiving 1.5 folds of maintenance normal saline serum which will be continued until discharge, Intervention group 2: Receiving 1.5 folds of maintenance half saline which will be continued until discharge + 7 cc bicarbonate/liter, Intervention group 3: Receiving 1.5 folds of maintenance normal saline which will be continued until discharge + 5 mg/ kg/ day Acetazolamide for 48 hours

Main outcome variables

The Frequency of Nephropathy due to Acute Hemolysis

Scientific title

Comparison of the frequency of acute hemolysis induced nephropathy in patients with glucose 6 phosphate dehydrogenase deficiency treated with 3 different therapeutic fluid treatments

Public title

Comparison of the frequency of acute hemolysis induced nephropathy in patients with glucose 6 phosphate dehydrogenase deficiency treated with 3 different therapeutic fluid treatments

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

age : 3 months - 18 years old hemoglobinuria \geq 2+ intra venous fluid therapy for at least 24 hours acute hemolysis induced Favism or glucose 6 phosphate dehydrogenase deficiency hospitalization for 24 to 72 hours

Exclusion criteria:

Presence of Dysatremia Central Diabetes insipidus or renal Diabetes insipidus Barrett's Syndrome Nephrotic Syndrome Chronic Kidney Disease Congestive heart failure Liver cirrhosis Metabolic diseases Diabetic ketoacidosis Congenital adrenal hypoplasia shock Glaucoma Addison's disease Unwilling to participate

Age

From **3 months** old to **18 years** old

Gender

Both

Phase

Groups that have been masked

No information

Sample size

Target sample size: **132**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization method: Simple randomization, randomization unit: individual, randomization tool: random number table Patients who met the inclusion criteria were selected by a random number table from left to right reading method. The numbers were between 00 and 44 in group 1 and patients with numbers between 44 and 88 in group 2 and patients with numbers from 88 to 132 were divided into group 3.

Blinding (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Glucose 6 Phosphate Dehydrogenase Deficiency

ICD-10 code

D55.0

ICD-10 code description

Anemia due to glucose-6-phosphate dehydrogenase [G6PD] deficiency

Primary outcomes

1

Description

The Frequency of Nephropathy due to Acute Hemolysis

Timepoint

Assessing the frequency of Nephropathy before intervention and 6, 12, 24, 48, and 72 hours after intervention

Method of measurement

Laboratory examination

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: Receiving 1.5 folds of maintenance normal saline serum which will be continued until discharge, Intervention group 2: Receiving 1.5 folds of maintenance half saline which will be continued until discharge + 7 cc bicarbonate/liter, Intervention group 3: Receiving 1.5 folds of maintenance normal saline which will be continued until discharge + 5 mg/ kg/ day

Acetazolamide for 48 hours
