Assessment of the ellagic acid supplementation effect on insulin resistance, oxidative stress and sex hormones levels in women with the Polycystic ovary syndrome.

Protocol summary

Study aim

Determination of ellagic acid supplement effect in women with polycystic ovarian syndrome

Design

In this study, 60 patients with the polycystic ovarian syndrome who are eligible to enter the study are selected. Participants are randomly divided into intervention and control groups and each participant will be assigned a code.

Settings and conduct

The aim of this study is to evaluate the ellagic acid supplement as a randomized, double-blind clinical trial on patients with polycystic ovary syndrome referring to the specialized department of the hospital of Qazvin University of Medical Sciences. People with polycystic ovarian syndrome after the introduction by a gynecologist, counselor for this project, will be randomly divided into two groups of intervention and control.

Participants/Inclusion and exclusion criteria

Inclusion criteria: the patients who are 18-45 years old diagnosed with the Polycystic ovarian syndrome; Having at least two criteria from Rotterdam's three criteria to diagnose this syndrome; Having a BMI of less than 30, Signed consent by the patient. Exclusion criteria: Pregnancy; lactation; menopause; infectious disease; inflammatory disease; Cushing's syndrome; adrenal gland tumor; hypothyroidism; increased prolactinemia; acromegaly; diabetes and cancer; hormone therapy over the past three months; taking antioxidant supplements over the past three months, drug use over the past three months includes contraceptives; glucocorticoids; lipid-lowering drugs and weight loss drugs,

Intervention groups

Intervention group: the group receiving ellagic acid (200mg daily) Control group: placebo group

Main outcome variables

Fasting blood sugar, insulin resistance, lipid profile,

oxidative stress indices, inflammatory factors, sex hormones, and Anti-Müllerian hormone.

Scientific title

Assessment of the ellagic acid supplementation effect on insulin resistance, oxidative stress and sex hormones levels in women with the Polycystic ovary syndrome.

Public title

Ellagic acid supplementation in women with the polycystic ovarian syndrome

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Women with the polycystic ovarian syndrome

Exclusion criteria:

Use of contraceptives, glucocorticoids and lipid lowering drugs over the past three months

Age

From **18 years** old to **45 years** old

Gender

Female

Phase

3

Groups that have been masked

- Participant
- Investigator

Sample size

Target sample size: **60**

Randomization (investigator's opinion)

Randomized

Randomization description

It will be done randomly using lottery method. Each patient will receive a number or code, and then we will write the numbers on pieces of paper. We will then place the pieces of paper in a container and select the samples according to the sample size.

Blinding (investigator's opinion)

Double blinded

Blinding description

Supplements and placebo will be placed in similar containers and encoded by someone except investigator, so patients and the investigator will be blinded to medicine and placebo groups.
