Clinical Trial of Cranfixer

Protocol summary

Study aim

The main objective of this project is to evaluate the performance of the Cranfixer as claimed by the manufacturer

Design

This investigation was done in an Unblinded manner. The report was provided from the results obtained during surgery as well as post-operative follow-up.

Settings and conduct

This product has a license from the Iranian Medical Devices Directorate and the related risks are reviewed based on the essential requirements and estimated by the FMEA method, and the points are mentioned to adverse events in the instructions sheet. This study is carried out at the hospital site and also by conducting follow-up from the manufacturer's site.

Participants/Inclusion and exclusion criteria

The application of this product is in neurosurgery. The patients with craniotomy are potentially candidate to use this product. There is no limitation in terms of age and sex.

Intervention groups

The patients with craniotomy in neurosurgery

Main outcome variables

Loosening; Infection; Prominence

Scientific title

Clinical Trial of Cranfixer

Public title

Cranfixer

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Neurosurgery that leads to the separation of the skull's flap

Exclusion criteria:

Age

No age limit

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **50**

More than 1 sample in each individual

Number of samples in each individual: **2**

In the most cases, two Cranfixer are used to fix the flap for each patient

Actual sample size reached: **66**

More than 1 sample in each individual

Actual sample size in each individual: **2**

In the most cases, two Cranfixer are used to fix the flap for each patient

Randomization (investigator's opinion)

N/A

Randomization description

Blinding (investigator's opinion)

Not blinded

Health conditions studied

1

Description of health condition studied

Flap Fixation instrument (Burr Hole Cover)

ICD-10 code

T84.2

ICD-10 code description

Mechanical complication of internal fixation device of

other bones

Primary outcomes

1

Description

Skull Flap Loosening

Timepoint

At least 6 month after surgery

Method of measurement

Qualitative Study (Touch)

2

Description

Infection

Timepoint

2 to 4 weeks after surgery

Method of measurement

Infection detection

Secondary outcomes

1

Description

Non-Touchable from The skin

Timepoint

At least 6 month after surgery

Method of measurement

Qualitative Study (Touch)

Intervention groups

1

Description

Intervention group: Cranfixer

Category

Treatment - Surgery

Title and more details about the data/document

Table of postoperative Information of patients. Data will be shared after unidentifiable people.

When the data will become available and for how long

Access to data is possible at the time of publishing results

To whom data/document is available

Individuals approved by the this team and the manufacturer

Under which criteria data/document could be used

If a person wants to access patient files, such as CT-scan for further study, it is possible with the manufacturer's permission. furthermore, the provided report from this study should be published with permission and the name of the manufacturer.

From where data/document is obtainable

Darman Afarin Noandish Afagh Company

What processes are involved for a request to access data/document

After the Submission of request and the confirmation, the information is provided by the company representative.
