Randomization (investigator's opinion)
Randomized

Randomization description
Those who have the conditions for entry into the study are given the necessary explanations for the study. A written consent form is signed by the patient and his wife and this way, people enter the study. At first, a demographic and clinical data form is made by the researcher and sexual function of women is completed in the interview. Then, people are classified according to age in four groups: 55-50, 60-55, 65-60 and 65-70 years old. Individuals are assigned code, and the groups are separated and separated by each other, using the lottery of the intervention group and the placebo. People in both groups are homogeneous in terms of age.

Blinding (investigator's opinion)

Double blinded

Blinding description
After the negotiation and conclusion of the contract with the pharmaceutical company Pursina Drosa Vitagnus, along with placebo, the company will supply the research unit. Both the vials and the placebo drops contain the same visual appearance, and will be inscribed only on the glass of the letters A and B.

Description of health condition studied

Sexual dysfunction

ICD-10 code

F52.8

ICD-10 code description

Other sexual dysfunction not due to a substance or known physiological condition

Primary outcomes

1

Description

sexual function

Timepoint

Comparison of the total sexual function of the units before, 4 weeks, 6 weeks, and 8 weeks after taking Vitagnus drops

Method of measurement

Comparison of sexual function before and after taking Vitagnus drops is measured by Rosen's Sexual Function Questionnaire.

Secondary outcomes

1

Description

Menopause symptoms

Timepoint

At the beginning of the study (before the study) 4 weeks, 6 weeks, 8 weeks

Method of measurement

Demographics and clinical demographic data form

Intervention groups

1

Description

"Intervention group": Intervention group: It is recommended to the research unit that at the beginning of the morning, use 40 drops of vitagnus with a cold drink for 2 months in the morning. The research unit is trained every two weeks and at the time of being in the center, the amount of drops consumed before the next visit is required and thus, people in terms of how the drops are consumed and how much they are consumed By handing the empty glass to the researcher, the drug is examined. Also, at the intervals of four, six and eight weeks from the onset of intervention, the sexual function questionnaire for the research unit is completed.
