

# Clinical Trial Protocol

## Iranian Registry of Clinical Trials

10 Jun 2026

### Evaluation the effect of the gastrojejunostomy technique (right to left or left to right) on the delayed gastric emptying after whipple's surgery

#### Protocol summary

##### Study aim

Evaluation the effect of the gastrojejunostomy technique on the delayed gastric emptying after whipple's surgery

##### Design

Two arm parallel group with single blinded postoperative care and outcome assessment

##### Settings and conduct

This clinical trial study will be performed in Arvand Hospital in Ahvaz and in two groups of patients with pancreatic cancer who have been nominated for Vipel surgery. The aim of this study is to investigate the effect of changing the technique of gastrojejunostomy on gastric emptying after surgery. In the first group, gastrojejunostomy will be performed with right-to-left anastomosis, and in the second group, left-right gastrojejunostomy will be performed.

##### Participants/Inclusion and exclusion criteria

all pancreatic cancer patients who candidate for wipple

##### Intervention groups

there is 2 group of patient. first standard group and second are patient who use wipple surgery with different technique in gastrojejunostomy anastomosis

##### Main outcome variables

evaluation of delayed gastric emptying syndrome

#### Scientific title

Evaluation the effect of the gastrojejunostomy technique (right to left or left to right) on the delayed gastric emptying after whipple's surgery

#### Public title

Evaluation of the effect of gastric surgery technique on gastric emptying

#### Purpose

Treatment

#### Inclusion/Exclusion criteria

##### Inclusion criteria:

All patients with pancreatic cancer who are candidates for Vipel surgery

##### Exclusion criteria:

Patients with pancreatic cancer who have underlying

liver disease or gastric gastroparesis.

**Age**

No age limit

**Gender**

Both

**Phase**

**Health conditions studied****1****Description of health condition studied**

Pancreatic cancer

**ICD-10 code**

C25

**ICD-10 code description**

Malignant neoplasm: Head of pancreas

**Primary outcomes****1****Description**

Delayed gastric empty syndrome

**Timepoint**

from operation day till 3 month after surgery

**Method of measurement**

history from patient

**Secondary outcomes**

empty

**Intervention groups****1****Description**

In the group of interventions in Whipple's surgery, with the right-to-left technique, by rotating one hundred and eighty degrees, the proximal lobe of the genome is connected to the cochlear laser, and after the operation, by phone call, the patient's history, nutrition, severity and The persistence of nausea and vomiting is questioned.

**Category**

Treatment - Surgery

**2****Description**

In the control group in Whipple surgery, with the left-to-right technique, the progeny lobe of the genome is connected to the gritter cortex. And after the operation, the patient will be asked by phone call about the patient's history, how to feed, the severity and persistence of nausea and vomiting.
