Scientific title
The effect of integrative counseling based on EX-PLISIT model in women with female orgasmic disorder (FOD)

Public title
The effect of integrative counseling based on EX-PLISIT model in women with female orgasmic disorder (FOD)

Purpose
Education/Guidance

Inclusion/Exclusion criteria
Inclusion criteria:
Having reading and writing literacy. Age of 18-45 years
Having a live husband Married Sexually active Not having other sexual disorders
Exclusion criteria:
Having or positive history of well-known psycho-somatic diseases Using sexually-suppressive drugs Having marital and interpersonal relationships satisfaction
Substance abuse Unwillingness to participate in any of the stages of the research and not attending more than one of the intervention sessions

Age
From **18 years** old to **45 years** old

Gender
Female

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **60**

Randomization (investigator's opinion)
Randomized

Randomization description
In this study, individuals will be allocate by simple random method in two groups; intervention and control. It is a technique that chooses individuals for intervention and control groups entirely by chance with no regard to the will of researchers or patients' condition and preference. In this study, simple random allocation will be done by tossing a coin.

Blinding (investigator's opinion)
Not blinded
