Effect of platelet-rich plasma (PRP) on dental extraction in patients at risk of medication related osteonecrosis of the jaw

Protocol summary

Study aim

The aim of this study was to assess the efficiency, as clinical healing, of the application of platelet-rich plasma (PRP) gel in the extraction sockets in patients treated with bisphosphonates at risk of medication-related osteonecrosis of the jaw (MRONJ)

Design

single center, single-arm not randomized clinical trial

Settings and conduct

1) Clinical Evaluation 2) Computer Tomography (CT) evaluation if needed; oral hygiene instructions; pre-operative medical therapy prescription; PRP preparation 3) Surgical procedure 4) Suture removal 5) Follow-up visits at 15, 30, 90, 180, 360 days

Participants/Inclusion and exclusion criteria

Inclusion criteria: 1) age > 18 years 2) metabolic bone disease and/or malignant tumors 3) treatment with bisphosphonates because of the underlying disease 4) required tooth extraction Exclusion criteria: 1) signs of MRONJ in the surgical area 2) previous history of irradiation to the head and neck area 3) neoplastic involvement of the jaws 4) poor general conditions 5) pregnant or breast-feeding women

Intervention groups

The surgical protocol expected: 1) Chlorhexidine 0,2% mouthwashes 30 ml swished up to 60 seconds 2) local anesthesia achieved using 3% mepivacaine hydrochloride without adrenaline 3) elevation of a full-thickness mucoperiosteal flap 4) tooth luxation and avulsion 5) if necessary, osteoplasty 6) debridement of the post-extraction socket and irrigation with rifamycin sodium 7) application of a single dosage of autologous PRP (Plateltex ACT System ®, Biomed, Modena, IT) 8) suture. To prepare the PRP and to induce its gelation, the materials provided by the manufacturer were used and the provided instructions followed [Mazzucco L, Balbo V, Cattana E, Borzini P. Platelet-rich plasma and platelet gel preparation using Plateltex. Vox Sang. 2008 Apr;94(3):202-8.]

Main outcome variables

Absence of signs related to MRONJ (Healing)

Scientific title

Effect of platelet-rich plasma (PRP) on dental extraction in patients at risk of medication related osteonecrosis of the jaw

Public title

Effect of PRP to prevent MRONJ after dental extraction

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

metabolic bone disease and/or malignant tumors
treatment with bisphosphonates because of the underlying disease required tooth extraction

Exclusion criteria:

clinical or radiological signs of medication related osteonecrosis of the jaw in the surgical area previous history of irradiation to the head and neck area neoplastic involvement of the jaws poor general conditions pregnant or breast-feeding women

Age

From **18 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

medication related osteonecrosis of the jaw

ICD-10 code

m87.1

ICD-10 code description

Osteonecrosis due to drugs

Primary outcomes

1

Description

Absence of signs related to MRONJ (Healing)

Timepoint

We scheduled follow-up visits to remove the suture seven days after surgery, and visited patients on the fifteenth day, and continued on month one, three, six and twelve

Method of measurement

Clinical and radiological signs

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group; the surgical protocol expected: 1) Chlorhexidine 0,2% mouthwashes 30 ml swished up to 60 seconds; 2) local anesthesia achieved using 3% mepivacaine hydrochloride without adrenaline; 3) elevation of a full-thickness mucoperiosteal flap; 4) tooth luxation and avulsion were gently performed with elevators and forceps; 5) if necessary, osteoplasty 6) debridement of the post-extraction socket with miller surgical curette and irrigation of the sockets with rifamycin sodium; 7) application of a single dosage of autologous platelet-rich plasma (Plateltex ACT System®, Biomed, Modena, IT) ; 8) tension-free soft tissue closure. To prepare the PRP and to induce its gelation, the materials provided by the manufacturer were used and the provided instructions followed [Mazzucco L, Balbo V, Cattana E, Borzini P. Platelet-rich plasma and plateletgel preparation using Plateltex. Vox Sang. 2008 Apr;94(3):202-8.]
