### The effect of body position on the arterial oxygen saturation of healthy premature neonates

#### Protocol summary

##### Summary

Aim: This cross over study was conducted to determine the effect of body position on the arterial oxygen saturation of healthy premature neonates. Totally 88 healthy premature neonates which were just feeding and being prepared to discharge, randomly selected. The neonates first randomly placed in prone or supine position, and 30 min later SpO<sub>2</sub> was measured over a 30 min interval. Then, the infants turned from prone to supine or from supine to prone, and a repeat set of measurement was made.
