ICD-10 code description

Primary outcomes

1

Description

Quality of Life Score for Pregnant Women in the World Health Organization Quality of Life Questionnaire (2004)

Timepoint

Measurements were performed at pre-test (Before the intervention), post-test (9 weeks after the intervention) and follow-up (15 weeks after the intervention).

Method of measurement

Measurement tools included the World Health Organization Quality of Life Questionnaire - Short Form (WHOQOL-BREF)(2004).

Secondary outcomes

1

Description

Anxiety

Timepoint

Measurements were performed at pre-test (Before the intervention), post-test (9 weeks after the intervention) and follow-up (15 weeks after the intervention).

Method of measurement

Instruments included beck anxiety inventory(1990)

2

Description

Perceived Stress

Timepoint

Measurements were performed at pre-test (Before the intervention), post-test (9 weeks after the intervention) and follow-up (15 weeks after the intervention).

Method of measurement

Instruments included Cohen perceived stress questionnaire (1983)

3

Description

General health

Timepoint

Measurements were performed at pre-test (Before the intervention), post-test (9 weeks after the intervention) and follow-up (15 weeks after the intervention).

Method of measurement

Instruments included Goldberg and Hiller general health questionnaire (1979)

Intervention groups

1

Description

Intervention group received Group Quality of Life Therapy based on Frisch Quality of Life Therapy during 8 sessions (weekly, 90 minutes, for 8 weeks).

Category

Lifestyle

2

Description

Control group received routine medical education for pregnancy period without any psychological trainings during 8 sessions (weekly, 90 minutes, for 8 weeks).

Category

Placebo
