

Clinical Trial Protocol

Iranian Registry of Clinical Trials

30 Jun 2026

Evaluation of the effects of add-on treatment with Atorvastatin on cognitive deficits in schizophrenic patients

Protocol summary

Study aim

Evaluation of cognitive state in schizophrenic patients before and after adding Atorvastatin to second generation antipsychotic drugs in comparison to the control group

Design

Randomised, double blind, parallel group, with intervention and control groups, clinical trial

Settings and conduct

Preparing Atorvastatin and placebo with a double-blind design (patients, evaluator, researcher) in closed packs and labeled with a code number by the pharmacologist. 64 schizophrenic patients admitted in Ebn-e Sina Hospital that fulfill the inclusion criteria

Participants/Inclusion and exclusion criteria

18 to 64 year old patients with minimum eight grade education and diagnosis of schizophrenia, with no medical, other psychiatric or substance use disorders (except cigarette), no history of major head trauma, no concomitant drugs that interact with atorvastatin, no history of serious adverse reaction to Atorvastatin, and not currently in another study, and women not pregnant or breastfeeding. In case of serious adverse reactions during this study or lack of cooperation by the patients or his/her families, they will be excluded from the study.

Intervention groups

In the intervention group, 20mg per day Atorvastatin and in the control group a placebo will be added.

Main outcome variables

Changes in positive and negative schizophrenic symptoms by Positive And Negative Symptoms Scale test and cognitive changes based on Stroop test, Wechsler test, Verbal Fluency test, Wisconsin Card Sorting test, Digit span test, and Trial Making test

Scientific title

Evaluation of the effects of add-on treatment with Atorvastatin on cognitive deficits in schizophrenic patients

Public title

Evaluation of the effects of add-on treatment with Atorvastatin on cognitive deficits in schizophrenic patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Diagnosis of schizophrenia based on DSM-5 patients between 18 and 64 years Informed consent by the patients and a member of his/her family Minimum eighth grade education No psychiatric comorbidity No medical comorbidity No substance use, except for cigarettes No history of hypersensitivity reaction or intolerable side effects with Atorvastatin No concomitant drugs that they interact with Atorvastatin (Anti-inflammatory drugs such as Aspirin and Ibuprofen, Thiazide diuretics, weight-loss drugs, anti-fungal drugs, Macrolids, Colchicin, Protease inhibitors) No pregnancy or breastfeeding (for women) No history of major head trauma No participation in other study in the time of this study No major cognitive deficits comorbidity

Exclusion criteria:

Failure to the patient or his/her family to continue the study Occurrence of any serious side effects during the study

Age

From **18 years** old to **64 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant
- Care provider
- Investigator
- Outcome assessor

Sample size

Target sample size: **64**

Randomization (investigator's opinion)

Randomized

Randomization description

The form of drug and placebo are similar and the patients and evaluators are blind in regards to their study group assignment. Drug and placebo will be prepared in closed packs and labeled with specific codes by the pharmacologist.

Blinding (investigator's opinion)

Double blinded

Blinding description

The form of drug and placebo are similar and the patients and evaluators are blind in regards to their study group assignment. Drug and placebo will be prepared in closed packs and labeled with specific codes by the pharmacologist.

Health conditions studied

1

Description of health condition studied

schizophrenia

ICD-10 code

F20

ICD-10 code description

Schizophrenia

Primary outcomes

1

Description

cognitive state

Timepoint

At the outset of the study (before intervention), at 21 days 42 days after starting Atorvastatin

Method of measurement

PANSS test, Stroop test, Digit span test, Verbal fluency test, Wechsler test, Wisconsin Card Sorting test, and Trial making test

Secondary outcomes

1

Description

positive and negative symptoms score

Timepoint

At the outset of the study (before intervention), and at 3 and 6 weeks after starting Atorvastatin

Method of measurement

Intervention groups

1

Description

Intervention group: The intervention group will take Atorvastatin tablet (20 milligram) once daily via oral route for 6 weeks. This drug will be produced by the Pharmacology department of Mashhad University of Medical Sciences

Category

Treatment - Drugs

2

Description

Control group: The control group will take placebo tablet once daily via oral route for 6 weeks. This drug will be produced by the Pharmacology department of Mashhad University of Medical Sciences

Category

Treatment - Other
