

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Jun 2026

Comparison of clinical and functional effects of static stretching and functional stretching exercises in lower limb muscles of patients with Multiple Sclerosis

Protocol summary

Study aim

Comparison of clinical and functional effects of static stretching and functional stretching exercises in lower limb muscles of patients with Multiple Sclerosis

Design

Randomized, single blinded trial with parallel group design of 22 patients with Multiple sclerosis allocated randomly into two static stretching and functional stretching exercises group

Settings and conduct

Pre and post assessments in each group are as follows: ROM assessment, pain intensity, spasticity and functional tests (TUG, T25FWT). For patients in static stretching group; hamstring, quadriceps, hip adductors and plantar flexors muscles will be stretched statically by therapist. For patients in functional stretching group; hamstring, quadriceps, hip adductors and plantar flexors will be stretched by patients actively with guidance of therapist. In both group each stretch will be kept for 30 sec and repeated 3 times with 15 sec rests. In both group after stretching, active or active assisted movements in the same direction of stretching will be done with 5 repetition.

Participants/Inclusion and exclusion criteria

Inclusion criteria: to have multiple sclerosis disease confirmed by specialist; to have spasticity with limb stiffness or contractures of muscles or soft tissue in lower extremity; being able to walk min 25 foot with/without assistive devices. Exclusion criteria: to use wheelchair; to use anti spasticity drugs.

Intervention groups

Intervention group 1: Static stretching exercises
Intervention group 2: Functional stretching exercises

Main outcome variables

pain, range of motion, spasticity, functional tests

Scientific title

Comparison of clinical and functional effects of static stretching and functional stretching exercises in lower limb muscles of patients with Multiple Sclerosis

Public title

Effects of stretching exercises in patients with Multiple Sclerosis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Multiple sclerosis confirmed by specialist to have spasticity with limb stiffness or contractures of muscles or soft tissue in lower extremity being able to walk min 25 foot with/without assistive devices

Exclusion criteria:

to use wheelchair to use anti spasticity drugs

Age

From **18 years** old to **65 years** old

Gender

Both

Phase

N/A

Groups that have been masked

- Participant

Sample size

Target sample size: **22**

Actual sample size reached: **24**

Randomization (investigator's opinion)

Randomized

Randomization description

Randomization by random allocation rule through lottery:for this study,for a total study size of 22;11 paper for static stretching group and 11 paper for functional stretching group will be put in a lottery pocket.Then for each patient one paper will be drawn randomly from pocket and patients will be randomly allocated into static and functional stretching groups.

Blinding (investigator's opinion)

Single blinded

Blinding description

Each individual will be involved in a trial separately,will be assessed separately and will be treated separately.

Health conditions studied

1

Description of health condition studied

multiple sclerosis

ICD-10 code

G35

ICD-10 code description

Multiple sclerosis

Primary outcomes

1

Description

spasticity

Timepoint

in the begining and end of the study

Method of measurement

modified modified ashworth scale

2

Description

function

Timepoint

in the begining and end of the study

Method of measurement

Timed Up and Go test and Timed 25 Foot Walk test

3

Description

active range of motion

Timepoint

in the begining and end of the study

Method of measurement

with goniometer

4

Description

pain

Timepoint

in the begining and end of the study

Method of measurement

Visual analog scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group:static stretching exercises will be applied 3 times in a week totally for 4 weeks.Hamistring,quadriceps,adductors and plantar flexors will be streched by researcher bilaterally.Each stretch will be kept for 30 seconds and repeated for 3 times.

Category

Rehabilitation

2

Description

Intervention group:functional stretching exercises will be done 3 times in a week totally for 4 weeks.Hamistring,quadriceps,adductors and plantar flexors will be streched by patient with guidance of reseacher.Each stretch will be kept for 30 seconds and repeated for 3 times.
