Formulation of Fast-Dissolving Sublingual Films of ondansetron Succinate by Electrospinning method and physicochemical and clinical evaluation in eye surgery patients

Protocol summary

Study aim

Formulation of Fast-Dissolving Sublingual Films of ondansetron Succinate by Electrospinning method and physicochemical and clinical evaluation in eye surgery patients

Design

A randomized, double-blind, Control and intervention groups clinical trial

Settings and conduct

In this study, first the ondansetron films were made in Kermanshah School of Pharmacy and then this formulation and marketed form are given to patients in Imam Khomeini Hospital Eye Surgery in Kermanshah. Patients are randomly divided into two groups, and the nurse and patient are blinded to this study as the patients are coded and do not know which medication they were taking.

Participants/Inclusion and exclusion criteria

The age range of patients is between 20 and 50 years. Excluded from the study in case of pregnancy and lactation. Patients should not have systemic diseases such as heart, kidney disease. Patients should not take anti-nausea medications until one day before surgery. Do not have a history of allergy to the drug and its components.

Intervention groups

In this study the efficacy and anti-nausea effect of ondansetron sublingual film is compared with the available forms in the market.

Main outcome variables

Nausea: An unpleasant feeling associated with awareness of the need for vomiting. Retching : Respiratory muscle contraction without gastric contents. Vomiting: Muscle contraction and gastric contents are told.

Scientific title

Formulation of Fast-Dissolving Sublingual Films of ondansetron Succinate by Electrospinning method and physicochemical and clinical evaluation in eye surgery patients

Public title

Evaluation of the Effect of Fast-Dissolving Sublingual Films of ondansetron on the Control of Nausea and Vomiting after Eye Surgery

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Signature of written consent for participation in the study
Age between 20 and 50 years
From the point of view of classification of physical condition the American Society of Anesthesiologists was in the 1st and 2nd position

Exclusion criteria:

Pregnancy, breastfeeding
Taking drugs with anti-nausea effect in 24 hours before surgery
History of motion sickness
The history of systemic diseases: heart, kidney, liver, lung, psychosis, diabetes
Nausea and vomiting within 24 hours before of eye surgery
Use of steroids 24 hours before surgery

Age

From **20 years** old to **50 years** old

Gender

Both

Phase

3

Sample size

Target sample size: **120**

Randomization (investigator's opinion)

Randomized

Randomization description

The randomization method is simple and the unit is individual. The random number table is used as a randomization tool. Creating a random sequence is based on a single sequence of random assignments. The encryption is also done using a random-coded encoded box.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this double-blind study, both participants and evaluators of the outcome were unaware of the allocation of study groups. That is, the drugs in each group are similar in appearance.

Placebo

Health conditions studied

1

Description of health condition studied

Patients candidate for eye surgery

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

The amount of nausea and vomiting

Timepoint

Baseline (immediately after surgery and before drug administration) and 1, 2, 4, 6 hours after drug administration

Method of measurement

Questionnaire with visual analogue scale

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: In this study, we use ondansetron, which is made as a sublingual film with polyvinyl alcohol and beta-cyclodextrin polymers. Films containing 4 mg ondansetron are given sublingually only once after surgery if nausea and vomiting occur.

Category

Treatment - Drugs

2

Description

Control group: Patients in the control group are given ondansetron sublingual tablets at a dose of 4 mg only once in case of nausea. The patient places the drug under his tongue. This form of medicine is produced by Pars Darou Company.
