Comparison of the efficacy of electroconvulsive therapy and repetitive transcranial magnetic stimulation

Protocol summary

Summary

There are contradictory reports regarding the antidepressant effects of repetitive transcranial magnetic stimulation. This study is a randomized, electroconvulsive therapy controlled, parallel group clinical trial comparing antidepressant effects of electroconvulsive therapy and repetitive transcranial magnetic stimulation in patients with major depressive disorder diagnosed according to clinical interview using DSM-IV criteria. Patients with each of the following items will be excluded: bipolar mood disorder, serious medical conditions, suicidal attempt, and the lack of patients' consent. Beck depression inventory and Hamilton depression rating scales are used to measure depression score as the main outcome.

Scientific title

Comparison of the efficacy of electroconvulsive therapy and repetitive transcranial magnetic stimulation

Public title

Comparison of the efficacy of electroconvulsive therapy and repetitive transcranial magnetic stimulation on Major depressive disorder

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion: 1- major depressive disorder, 2- age>20, 3- voluntary participation. Exclusion: 1-bipolar mood disorder, 2- serious medical conditions, 3- suicidal attempt, 4- lack of consent.

Age

From **19 years** old to **65 years** old

Gender

Both

Phase

1

Groups that have been masked

No information

Sample size

Target sample size: 60

Randomization (investigator's opinion)

Primary outcomes**1****Description**

Depression score

Timepoint

before and after 10 sessions of intervention

Method of measurement

Questionnaire

Secondary outcomes

empty

Intervention groups**1****Description**

The patients in electroconvulsive therapy group receive 10 sessions (3 days per week). There are 3 sessions of electroconvulsive therapy in each week for each patient

Category

Treatment - Other

2**Description**

The patients in repetitive transcranial magnetic stimulation group receive repetitive transcranial magnetic stimulation daily for 10 days (Saturday to Wednesday). Each session is 10 minutes with a large figure of eight coil
