Comparison of recurrence and postoperative complications between open and laparoscopic surgical procedures ventral hernia repair

Protocol summary

Study aim

Comparison of recurrence and postoperative complications between open and laparoscopic surgical procedures ventral hernia repair

Design

This study will be conducted as a randomized, double-blind clinical trial.

Settings and conduct

This study is about comparison of recurrence and postoperative complications between open and laparoscopic surgical procedures ventral hernia repair in Imam Khomeini Hospital in Kermanshah. In this study, the patients and the peoples who measuring the variables would be unaware of the presence of patients in the first group and or in the second groups. Only the surgeon aware about grouping.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Ages between 18 and 65 years old - Have ventral hernia surgery by laparoscopic and open method Exit criteria : Emergency hernia - Factors that increase intra-abdominal pressure, such as COPD, too much obesity, BPH and pregnancy

Intervention groups

Intervention: Surgical type Intervention group1: Surgical patients with laparoscopic surgery Intervention group2: Surgical patients with open surgery

Main outcome variables

Infection, hematoma, skin necrosis and seroma caused by laparoscopy and open surgery Duration of hospitalization after laparoscopic and open surgery Time to feel pain after laparoscopy and open surgery Time to return to work after laparoscopic and open surgery

- Outcome assessor
- Data analyser

Sample size

Target sample size: **120**

Randomization (investigator's opinion)

Randomized

Randomization description

The assignment of patients to each group will be applied based on randomization block to control the effect of age and sex. And so on the proportion of sex (women and men) and age (under 40, 40 years old and more) will be approximately the same in the two groups.

Blinding (investigator's opinion)

Double blinded

Blinding description

In this study, the patients and the peoples how measuring the variables would be unaware of the presence of patients in the first group and or in the second groups. Only the surgeon aware about grouping, after of ending the evolution of necessary variables, groups of each person will be spesified in cheklist, based on coding system.

Health conditions studied

1

Description of health condition studied

Ventral hernia

ICD-10 code

K43.9

ICD-10 code description

Ventral hernia without obstruction or gangrene

Primary outcomes

1

Description

Infection caused by laparoscopy and open surgery

Timepoint

1: 6 weeks after surgery 2: 6 ± 15 months after surgery

Method of measurement

By observing the patient

2

Description

Hematoma caused by laparoscopy and open surgery

Timepoint

1: 6 weeks after surgery 2: 6 ± 15 months after surgery

Method of measurement

By observing the patient

3

Description

Skin necrosis caused by laparoscopy and open surgery

Timepoint

1: 6 weeks after surgery 2: 6 ± 15 months after surgery

Method of measurement

By observing the patient

4

Description

Seroma caused by laparoscopy and open surgery

Timepoint

1: 6 weeks after surgery 2: 6 ± 15 months after surgery

Method of measurement

By observing the patient

5

Description

Duration of hospitalization after laparoscopic and open surgery

Timepoint

After surgery until discharge

Method of measurement

Duration of patient admission in hours, in hospital after surgery

6

Description

Time to feel pain after laparoscopy and open surgery

Timepoint

Immediately after surgery

Method of measurement

The number of minutes someone has pain after the surgery

7

Description

Time to return to work after laparoscopic and open surgery

Timepoint

Immediately after surgery

Method of measurement

The number of hours that a person will need to return to his head after surgery.

Secondary outcomes

empty

Intervention groups

1

Description

The intervention is the type of surgery. Intervention group1: Patients who are eligible for inclusion in the study are included in the study and without knowing , they are undergoing laparoscopic surgery. Laparoscopic surgery is a type of surgery in which, a thin, luminous tube is placed inside a cut in the abdomen or pelvis so that the surgeon can see the patient's part without breaking the member and then heal it.

Category

Treatment - Surgery

2

Description

The intervention is the type of surgery. Intervention group2: Patients who are eligible for inclusion in the study are included in the study and without knowing , they are undergoing open surgery. Open surgery is a

type of surgical procedure in which the skin and muscles are completely cracked and opened so that the surgeon can see the patient's part with the eye and then heal it.

Title and more details about the data/document

After the samples being unidentifiable, data is publishable .

When the data will become available and for how long

The access period; Starts 6 months after publishing the results

To whom data/document is available

Researchers working in academic and scientific institutions

Under which criteria data/document could be used

People who try to help science can use data.

From where data/document is obtainable

Expert of Research Unit of Imam Khomeini Hospital in Kermanshah , Sharman Rahmani , sh.rahmani90@yahoo.com

What processes are involved for a request to access data/document

1- Send a request to sh.rahmani90@yahoo.com 2. The purpose of the data request, stated clearly. 3- If

confirmed by the main executor, immediately proceed.
