A study to compare the relative bioavailability of Aramis Pharmed and Merck extended release formulations of metformin 1000 mg tablets in 24 healthy adult volunteers under fasting conditions

Protocol summary

Study aim

The study aims to compare the bioequivalence of metformin 1000 mg extended release tablets under fasting conditions

Design

This randomized, single-dose, two-way, crossover study is conducted to compare the pharmacokinetic of metformin and Glucophage® tablets in 24 healthy adults male volunteers. Volunteers will be sorted and receive a number from 1 to 24. In the first phase of the study, 12 volunteers will receive metformin manufactured by Aramis Pharmed Pharmaceuticals and the remaining 12 volunteers will receive Glucophage® produced by Merck. The administered drugs will be replaced by each other in the second phase of the study. Since in this study, the volunteers will receive both Test and Reference drugs, each volunteer will act as his own control.

Settings and conduct

The dose administration and subsequent sample collection will be performed in S. Motahhari hospital (Gonbade Kavous, Iran).

Participants/Inclusion and exclusion criteria

Males, 18-50 years of age. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. Good health at screening. Exclusion criteria: History of any drug hypersensitivity or intolerance. Significant history or current evidence of chronic disease. Receipt of any drug as part of a research study within 30 days prior to the present study.

Intervention groups

First intervention group: A single oral dose of metformin 1000 mg extended release tablets manufactured by Aramis Pharmed company to 12 subjects. Second intervention group: A single oral dose of metformin 1000 mg extended release tablets manufactured by Merck company to 12 subjects. Since in this study, the

volunteers will receive both Test and Reference drugs, each volunteer will act as his own control.

Main outcome variables

Drug plasma concentration; Area under the plasma concentration-time curve

Scientific title
A study to compare the relative bioavailability of Aramis Pharmed and Merck extended release formulations of metformin 1000 mg tablets in 24 healthy adult volunteers under fasting conditions

Public title
Bioequivalence study of metformin 1000 mg extended release tablets under fasting conditions

Purpose
Health service research

Inclusion/Exclusion criteria
Inclusion criteria:
Males, 18-50 years of age. The subject is able and willing to provide signed informed consent. The subject is available for the entire study period and is willing to adhere to protocol requirements as evidenced by written informed consent. The subject has stable residence and telephone. Good health as determined by lack of clinically significant abnormalities in health assessments performed at screening.

Exclusion criteria:
History of allergy or sensitivity to metformin. History of any drug hypersensitivity or intolerance which, in the opinion of the investigator, would compromise the safety of the subject of the study. Significant history or current evidence of chronic infectious disease, system disorder or organ dysfunction. Presence of gastrointestinal disease or history of malabsorption within the last year. History of a medical disorders occurring within the last year that required hospitalization or medication. Use of pharmacologic agents known to significantly induce or inhibit drug-metabolizing enzymes within 30 days prior to dosing. Receipt of any drug as part of a research study within 30 days prior to the present study. Donation or significant loss of whole blood (480 ml or more) within 30 days prior to the present study.

Age
From **18 years** old to **50 years** old

Gender
Male

Phase
Bioequivalence

Groups that have been masked
No information

Sample size
Target sample size: **24**
More than 1 sample in each individual
Number of samples in each individual: **14**
A volume of 3 ml of blood is obtained in each sampling time through a venous cannula

Randomization (investigator's opinion)
Randomized

Randomization description

Each subject is identified by a number from 1 to 24. This number is allocated according to their entrance to volunteers' list in the screening day. Then, the following randomization table is used according to the crossover design of the study. All participants randomized into two sequences of Test/Reference and Reference/Test products
Subjects Dosing Sequence Day 1 Day 8 1 R/T
Reference Test 2 T/R Test Reference 3 T/R Test Reference 4 R/T Reference Test 5 T/R Test Reference 6 R/T Reference Test 7 R/T Reference Test 8 T/R Test Reference 9 T/R Test Reference 10 T/R Test Reference 11 R/T Reference Test 12 R/T Reference Test 13 T/R Test Reference 14 T/R Test Reference 15 T/R Test Reference 16 R/T Reference Test 17 T/R Test Reference 18 R/T Reference Test 19 R/T Reference Test 20 R/T Reference Test 21 T/R Test Reference 22 T/R Test Reference 23 R/T Reference Test 24 R/T Reference Test

Health conditions studied

1

Description of health condition studied

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Drug plasma concentration

Timepoint

At time zero and 1, 1.5, 2, 2.5, 3, 3.5, 4, 5, 6, 8, 10, 12 and 24 h after drug administration

Method of measurement

Blood sampling and measurement of drug concentrations by HPLC

2

Description

Area under plasma concentration-time curve

Timepoint

At time zero and 1, 1.5, 2, 2.5, 3, 3.5, 4, 5, 6, 8, 10, 12 and 24 h after drug administration

Method of measurement

Blood sampling and measurement of drug concentrations by HPLC

Secondary outcomes

1

Description

Plasma half-life

Timepoint

From the terminal 16 hours of plasma concentration-time profile

Method of measurement

Blood sampling and drug analysis by HPLC

Intervention groups

1

Description

Intervention group: Oral administration of a single dose of metformin 1000 mg tablet manufactured by Aramis Pharmed Pharmaceuticals (Slomet) to healthy volunteers under fasting condition in the morning of the experiment day

Category

Treatment - Drugs

2

Description

Intervention group: Oral administration of a single dose of metformin 1000 mg tablet manufactured by Merck Co. (Glucophage) to healthy volunteers under fasting condition in the morning of the experiment day

Category

Treatment - Drugs
