Effect of milk consumption after resistance training on glycemic control and irisin response in type 2 diabetic men

Protocol summary

Study aim

The aim was to investigate the effect of milk consumption after resistance training (RT) on glycemic control and irisin response in type 2 diabetic (T2D) men.

Design

Randomized Control Trial

Settings and conduct

The training was conducted in a gym in Qazvin.

Participants/Inclusion and exclusion criteria

36 type 2 diabetic men selection criteria: 6 months history of type 2 diabetes Exclusion criteria: lack of any diabetic complications (neuropathy, nephropathy, retinopathy), not being under insulin treatment, no regular participation in sport activities over the last six months, no change in anti-glycemic medication over the last two months, no weight loss over 5% at last two months, no extreme obesity (BMI<40), no consumption of hormonal drugs or hormone-therapy such as thyroid, etc., no consumption of alcohol beverages, cigarette, and other drugs.

Intervention groups

Resistance Training Group Resistance and milk training group

Main outcome variables

Blood sugar Insulin Glycosylated hemoglobin irisin
Muscle strength Diameter of muscle

Scientific title

Effect of milk consumption after resistance training on glycemic control and irisin response in type 2 diabetic men

Public title

Exercise and Milk Consumption in Diabetes

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

diabetics men age between 45-60 year

Exclusion criteria:

diabetic complications (neuropathy, nephropathy, retinopathy) under insulin treatment participation in regular sport activities over the last six months change in oral anti-glycemic medication over the last two months weight changes over 5% at last two months extreme obesity (BMI<40) consumption of hormonal drugs or hormone-therapy such as thyroid, etc. consumption of alcohol beverages, cigarette, and other drugs

Age

From **45 years** old to **60 years** old

Gender

Male

Phase

Sample size

Target sample size: **36**

Actual sample size reached: **36**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple, individualized randomization using random number table Each person was given a code ranging from 1 to 36 and the person who was unaware of the codes was randomly assigned 12 codes. The first 12 codes were assigned to the intervention group 1, the next 12 codes to the intervention group 2 and the next 12 codes to the control group.

Health conditions studied**1****Description of health condition studied**

type 2 diabetes

ICD-10 code

E11.6

ICD-10 code description

Type 2 diabetes mellitus with other specified complications

Primary outcomes**1****Description**

fasting blood sugar

Timepoint

Before and after the study

Method of measurement

blood sampling

Secondary outcomes**1****Description**

Muscle strength and circumference

Timepoint

before and after study

Method of measurement

A maximum repetition and measurement with tape measure

Intervention groups**1****Description**

Intervention group 1: resistance training. The group performed 8 weeks of resistance training with a maximum of 12 repetitions for 3 days per week. Each movement was performed in 3 sets, each lasting 45 minutes. The movement consisted of 7 gestures. Breast Press, Foot Press, Shoulder Press, Ab Crunch, Seated Cable Rows, Leg Extension, Lat Pulldown

Category

Lifestyle

2**Description**

Intervention group 2: resistance training and milk intake. This group performed Intervention group 1 training and consumed 500 ml of low-fat milk immediately after each training session.
