

Clinical Trial Protocol

Iranian Registry of Clinical Trials

27 Jun 2026

Evaluation of effects of probiotics on incidence of Ventilator Associated Pneumonia in Intensive Care Unit Patients

Protocol summary

Study aim

Effects of probiotics on the incidence of Ventilator-Associated Pneumonia in Intensive Care Unit Patients.

Design

A clinical trial with a control group, parallel groups, single blind, randomized, phase 3

Settings and conduct

Patients suffered from respiratory failure who has invasive airways who need mechanical ventilation in intensive care units randomly will be divided into two groups of intervention and control. In the intervention group, patients will take contents of Lactocare capsule via a naso-gastric tube. in the control group, patients will take contents of starch capsule via the naso-gastric tube as a placebo. Blinding: patients do not know the kind of prescribed drugs

Participants/Inclusion and exclusion criteria

Need to more than 48 hours of mechanical ventilation;
No respiratory infection before initiation of mechanical ventilation; Need to invasive airways; No history or any sign and symptoms of any kind of immune deficiency.

Intervention groups

Intervention group: prescription of Lactocare capsule as a probiotic for evaluation of its effects on the reduction of incidence of ventilator-associated pneumonia Control group: prescription of the starch capsule as a placebo for comparison to the intervention group

Main outcome variables

Fever, leukocytosis, new lung infiltration in chest x-ray, signs of lung consolidation on auscultation

Scientific title

Evaluation of effects of probiotics on incidence of Ventilator Associated Pneumonia in Intensive Care Unit Patients

Public title

evaluation effects of probiotics on ventilator associated pneumonia

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria:

Need to more than 48 hours of mechanical ventilation
No respiratory infection before initiation of mechanical ventilation
Need to invasive airways

Exclusion criteria:

History or any sign and symptoms of any kind of immune deficiency

Age

No age limit

Gender

Both

Phase

3

Groups that have been masked

No information

Sample size

Target sample size: **126**

Randomization (investigator's opinion)

Randomized

Randomization description

Simple randomization by computer-generated random numbers, patients according to the computer-generated random list will divide into the study and control group. (numbers lower than 0.5 in the study group and numbers greater than 0.5 in the control group).

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Used

Assignment

Parallel

Other design features

Secondary Ids

empty

Ethics committees

Approval date

2017-06-16, 1396/03/26

Ethics committee reference number

IR.mui.REC.1396.3.261

Health conditions studied

1

Description of health condition studied

Ventilator associated pneumonia

ICD-10 code

J18.9

ICD-10 code description

Pneumonia, unspecified

Primary outcomes

1

Description

Pneumonia

Timepoint

Daily (at 8 AM) till end of mechanical ventilation

Method of measurement

Auscultation of lungs by stethoscope, measuring body temperature by thermometer, chest x ray

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Prescription of Lactocare Capsule, a mixed preparation of useful bacteria (lactobacils, Bifidobacils, Streptococcus), prepared by Zist Takhmir Pharmaceutical Company (Tehran-Iran), each 12 hours content of one capsule solve in 100 ml of water and gavage by nasogastric tube.

Category

Prevention

2

Description

Control group: Prescription of Placebo Capsule filled by starch, each 12 hours content of one capsule solve in 100 ml of water and gavage by nasogastric tube.

Category

Placebo
